Glory to God — Peace on Earth

Good Will to Men

One thousand, nine hundred and forty-nine years have passed since the Angels of Heaven sang that song as they joyously celebrated the Birth of a Saviour. That Saviour was a gift of Love from God to lift fallen man upward from the beastly nature into which he had fallen.

Centuries have passed since that Christmas yet today, hate, not love, chaos, not law, materialism, not religion, seem to hold sway. Yet man has high ideals.

If we were merely beasts and not "made a little lower than the Angels" there would be no ideals. But with the event of that first Christmas there was ushered in a revealing light illuminating his pathway.

Why is there hate, wars, drunkenness, crime

rampant, evil in high places? Because we have thought our scientific "know how" were advances toward perfection. Man felt materialism enough and it reached toward God.

But all of a sudden there is chaos. Not only is evil rampant but science and its "know how" reaches its bony hand for his destruction.

The beast in man crucified a Savior who sought his salvation through LOVE even in His death.

Worship—that is heart loyalty to Him and His teachings has become a ritual, one of fancy edifices, the God of money and luxury.

Our Constitution was made amidst danger yet with prayers reaching toward God for guidance.

Man must organize God's resources of love and brotherhood or perish.

—EDITOR.

Happy and Prosperous New Year

As your Editor—a position unsought—with all the officials of the JOURNAL's Office and of the American Association for Medico-Physical Research we wish you a prosperous and a Happy New Year.

We wish to contribute much to you and your professional careers during the year toward that end. We ask your devoted support.

Our budget has been made for the year but there is a demand for a larger income with which to enlarge the JOURNAL and for a monthly JOURNAL.

Inspired by the greater horizon which our last convention discovered we can no longer be satisfied with feeding our members and a slowly expanding membership but must reach through our liberal Forum for discussion the rank and file of liberal healers and the public as well.

Toward that end we solicit your extended financial support. Of course your prompt renewal of membership will be one method to aid our future expanded plans.

—YOUR OFFICIAL FAMILY

A Report of the Detroit Cancer Conference

By J. W. KANNEL, M.D.

I will endeavor to give you a summary of the Detroit meeting of the Christian Medical Research League. June 17, 18 and 19, 1949, with some appended remarks on Koch Therapy.

Each session was called to order by the President, Dr. Swain, and opened with prayer, to which we point with deepest reverence as being most unusual in Medical Association gatherings; and apparently the Great Jehovah smiled on us and blessed our efforts in communing together and sharing with each other the knowledge of our experiences with the use of the Koch Treatment; some of those experiences was little short of miraculous of recoveries from diseases which had previously been branded as hopeless by other methods of treatment.

A great deal of enthusiasm was manifested in the discussion of the many scientific papers presented. Each speaker hoped that the TRUTHS there presented might be heralded around the world to the masses of suffering humanity who have been denied that panacea through the vicious propaganda of the enemies of Scientific Progress who all the time advocate the Quackery of their Antiquated methods of Surgery, X-Ray and Radium, for mercenary reasons, rather than acknowledge the efficacy of Chemo-Therapy by the Koch Treatment which has been here for 31 years. The assembly of 127 physicians from all over the United States, Canada, and South America, formed a nucleus of the beginning of what is to be the Greatest Scientific Body of Medical Associates in the World from whose demonstrations of results in the treatment of diseases, successfully, which were previously considered incurable by the old methods—when the Koch theory is understood by the masses of afflicted people—will revolutionize the practice of medicine and relegate to oblivion many old theories and procedures.

After 27 years of groping with failures by the recognized methods advocated by the A. M. A. I have for 24 years since 1925 used the Koch Treatment in 250 cases of various diseases with great satisfaction and success, where previously I loathed to have those chronics, thought incurable, for my patients.

A few of the most prominent and unusual I here mention: Cancer of the Stomach, Uterus, Breast, Duodenum, Lungs, Osteo-Sarcoma, Tuberculosis of the Lungs, Asthma, Emphysema, Sinus Infection, Epilepsy, Thrombosis of the Coronary Artery, Arthritis, Artero-Sclerosis, Undulant Fever, Systemic Infections and Allergies where old methods have failed, etc. The enemies of the Koch Treatment

do not understand, or do not wish to, and keep telling the public that it is perfectly absurd—for just one dose of the same chemical to bring about a cure of so many different diseases. Yet we claim and have demonstrated "*That the Oxydation Process—as it works in the Koch Treatment can Cure any Human Ailment.*" (Quotation from Dr. William Hales address June 19, 1949, in Detroit.) Why? These diseases are all due to some special infection in the blood-stream which can only be destroyed or eliminated by oxydation of the blood-cells or bacteria; the debris which is hanging on interferes with red-cells carrying a full load of oxygen, each time they return to the lungs—and thence back through the general circulation every 23 seconds to some part of our body where they consume the debris of dead cellular tissue and establish a natural immunity, after which *Nature brings about the Cure*. It is plainly seen that this procedure will eliminate the necessity of a multiplicity of remedies for the cure of many diseases—and curb the Drug Industry—where the Koch Synthetic Anti-Toxine does the job. Little wonder that the surgeon, x-ray and radium technicians and large drug industries object where money and their avarice rules rather than their desire for the recovery of the sick patient.

We take our hat off to Dr. Koch, who through divine beneficence of the Great Jehovah was vouchsafed the acuity of vision in making the discovery of this miraculous chemical which is destined to simplify the practice of medicine, when recognized and utilized by all. "So mote it be," soon.

May I now digress for a minute. Our old family physician who treated me when a boy, through typhoid fever, came to our country home on horseback with his saddlebag swung across the pommel of his saddle, filled with the makings of some of the most nauseating concoctions which he was an adept at mixing, as I still vividly remember; but in after years being called to treat my sick little daughter, he, old and decrepit, provoked my curiosity when he called for one-half glass of water and a teaspoon—then withdrew seven little vials of tinctures from his inside coat pocket—adjusted his spectacles and dropped a few drops from three of them into the glass, and told me to give a teaspoon to the child every hour. When I said, "Doctor, it seems to me that you don't give as much medicine as you used too," he replied, "When I began practicing medicine, I had fifty remedies for every disease, but now I have one remedy for fifty diseases."

Wonderful progress! So it will be when the Koch Treatment is thoroughly understood and used. The scourge of Polio, Cancer, Tuberculosis, Coronary Occlusion, etc., before mentioned, will be throttled and miraculously cured before and with-

ENFIELD, CONN.

out surgery, x-ray, or radium cripples them and makes it impossible to save and prolong their life.

The young, intimidated doctor and the old doctor will be the real scientific doctors who can retire at night after a busy day's work in administering to the sick with a clear conscience, knowing he has ameliorated the suffering of his patients and not contributed to or enhanced their suffering by mutilating or burning with excruciating pain to a slow murder and premature death. He knows in due time nature will be relieved of its handicap and they will be restored to health.

To know the chemical composition of the Koch medicine would not be of any material benefit to a patient—what the patient wants—is restoration to health; hence it must rest with the organic chemist who, if he wills, to explain its chemical structure to an inquisitive doctor or an associate scientist.

A few doctors refuse to give the Koch medicine because they can't analyze it, and don't know what is in it; but ridiculously they prescribe compositions where it is printed on the labels what is supposed to be in them, and too many of such combinations are full of incompatibles. A very flimsy excuse for not using the Koch treatment and getting marvelous recoveries which would then convince them of its tremendous efficacy.

I don't wish to be verbose or take too much of your valuable time. Therefore I will report only a few unusual cases: 1st, Insanity at the Climaetriae: A lady 42 years old, mother of one son (who is now of age), became insane and was treated in a sanitarium for eight weeks—given the Shock Treatment at a cost of \$750.00—then sent home—followed by a relapse in a few months worse than originally. I gave her one dose of glyoxylide June 24, 1948; all went fairly well until the ninth week reaction, when she became violent with a destructive tendency—had to be restrained in the county

jail for a week—after which her mind cleared up completely and she remains well and attends to business and does all of her housework, and is now apparently very happy.

2nd case—Trichinosis: A lady 58 years old gave a history of eating quantities of raw pork of which she was very fond. Had arthritis in knees, and several very large varicose ulcers on both legs—out of which small worms were crawling; some wound up into little spiral globules. Gave one dose of glyoxylide October 9, 1948; August 15, 1949, ulcers all healed except two little raw spots size of my thumbnail; no worms found any place and patient gained ten pounds and had thrown crutches away and is now able to walk with a cane. I reasoned that by establishing a natural immunity in the blood, the worms would be deprived of their natural pabulum and they would starve to death. That proved true.

Case 3—Coronary Thrombosis: Patient 64 years old. Diagnosis made from cardiograph and clinical symptoms—Asthmatic breathing, severe uncontrollable cough, blood pressure S. 102 D., pulse 96, Temp. 98. Gave one dose of glyoxylide July 5, 1949. Patient had severe reactions 3d and 6th weeks, but cough gradually subsided and now after 9th week September 10th, is very comfortable, breathing deep and has gained six pounds; back at work—S. 112, D. 60.

Case 4—Lady 66 years old: Had been in Irene Byron Sanitarium seven months, then dismissed and sent home because they could not find any T.B. germs in her sputum. They told her "they did not know what to do for her." Came to me June 17, 1949. She was expectorating pus and corruption and carrying her sputum cup and having a very severe coughing spell and panting for her breath while in my office. By the saline test, I found all the red cells infected. My diagnosis was cancer of

the lungs. June 20, 1949, I gave a dose of glyoxylyde—August 24th check-up—patient much improved; cough almost gone; does not carry sputum cup any longer, and needs no vessel by her bed since the second week to expectorate into as before. She can now lie down and sleep; is comfortable; has gained two pounds. I forgot to say—this patient had attacks of petit mal which have subsided, until they are hardly noticeable—so reported by her husband; has a good appetite, and is now cheerful, realizing that she has a new lease on life.

Before closing this paper, I want to report to this convention my findings from observation in cases which have recently been treated by surgery, and deep x-ray or radium therapy. Several in which I made microscopic examination of the red blood cells were found apparently broken up into small segments, which crippled condition I believe is responsible for their inability to carry oxygen in sufficient quantity to burn off the toxins—and hence are the fatal cases which will not respond to the Koch or any other treatment. I also observed cases which had had deep x-ray therapy several years before and then later had a return of their cancer—the red cells had recovered to such an extent they were able to cooperate by using the oxygen as carried by the Koch glyoxylyde. A few such cases have made a recovery.

And, now, who are the quacks? Stop and let us reason together. Let the public be the judge. How about the men who butcher you and follow it with burning x-ray or radium until their patients writhe with excruciating pain which requires enormous doses of the most powerful narcotics to appease their sufferings which gradually saps all of the reserve energy from them until they slowly die? When such eminent surgeons as Charles Mayo, who said, before he died, "that of 100 cases of cancer of the breast which they operated upon, I am sorry to say 99 of them come back."

The eminent English surgeon, Dr. Lane, said "he had operated on 1,000 cases of cancer and followed with x-ray and radium treatments—(995 of them are dead and the other six proved not to be cancer)". Oh, when will the surgeons wake up to the fact that cancer is not a local disease? But due to a toxine in the bloodstream which has been present there for many years, possibly, before nature localized the growth which became a manufacturing plant to make anti-toxine to further hold in check the infection? To cut or burn out the growth can never remove the infection from the blood. Such but only adds to the danger and distress of the patient until by a rapid return of another growth—either at the original location or by metastasis in some other location, if enough vitality still remains—to create another plant, which may for a short time again, temporarily, lengthen the life.

Contrast the above picture with the results which follow the use of the Koch treatment!—a harmless synthetic chemical anti-toxine which may be given in full doses to young or old alike with no ill effects, even though a grippy like reaction may occur periodically every three weeks, which shows the dynamic influence of the remedy which has baffled enemies who could not analyze it, and in their ignorance chose to label it "Nothing but distilled water." Following each of these reactions a marked change ensues through the oxydation process which has been set up, and augmented, after each period, until a *Natural Immunity* is established. Then Nature completes the cure by removing the cancer, a no longer needed growth, and restores healthy healed tissues, previously damaged by the toxins until the recovery is complete. No maiming, no crippling, no destruction of any part of the body, but back to a healthy state. As proof, may I cite cures of cancer of the uterus capable of reproduction, in which several mothers have given birth to children thereafter, normally. No other method of treatment has ever produced such results. As the recovery process proceeds, the pain and distress gradually decreases so that narcotics can be omitted and in many cases not used after the Koch anti-toxine was given.

Tell the patient the truth; ask him which plan of treatment he would prefer. Wake up the intimidated doctors to the new chemo-therapy by the Koch method. Stop the slow murder of 300,000 victims each year by the old antiquated procedures. Use the *new* which has been proven to save 72 per cent from untold misery and untimely death and further immunize them from infectious diseases, like Polio, for the rest of a long life. I have irrefutable evidence from experience of the above stated facts. I challenge an unbiased investigation so that the great mass of people may get the truth—I have no fears of the verdict—who are the quacks? Who are responsible for this fearful loss? I will be sorry if I am misunderstood; because I have many excellent friends among the 90,000 highly educated physician subscribers of the *A. M. A. Journal* who have been misinformed and misguided through the untruthful, published propaganda by the deposed Editor because of his failure to shackle Dr. Koch and get control of him and his products, by which no doubt he expected to profiteer. Hence he takes the credit for the persecution of Dr. Koch by inveigling the U. S. Pure Food and Drug Department into prosecuting Dr. Koch by trumping up flimsy charges which they could not substantiate in two five-month trials in Federal Court. By which millions of the taxpayers' money was squandered. This has only succeeded in beclouding the TRUTH from the public—so that they may still continue to filch millions of money during the April cancer drives from an innocent and unsus-

pecting public on the pretense they are trying to find a remedy for the cure of cancer. By which act alone they admit their present methods are failures; yet refuse to admit a CURE is already here, and has been here for the last 31 years.

Since Senator Langer of North Dakota presented and advocated the use of the Koch Treatment before the Senate of the United States, July 6, 1948, there has been a gentle wave of *truthful influence* spreading over this Nation which cannot now be halted. "TRUTH CRUSHED TO EARTH WILL RISE AGAIN."

Meditations on Causatives

CELL THOUGHTS: At the beginning of operational imbalance in the cell, what is the cause? Is it a disturbance in OSMOTIC pressure due to . . . lack of full mineralization . . . or . . . other factors disturbing the supply or acceptance of maybe the COSMIC RAY, the final explosion of the MESON of the atom in the cell? So disturbing final cell elimination? Can it, secondarily, be the thickening of plasm due to overindulgence or the induction of NEGATIVES (carbon or hydrogen excesses), thus thickening the plasma and so interfering with the osmotic flow of liquidities through the cell wall or membrane . . . or causing an unacceptability by the cell of impositional plasmatic substances, not harmonious to cell operation . . . or . . . the absorbing of the essential Cosmic Ray by these impositional forms BEFORE they can be used by the cell . . . or . . . is there an electronic aspect from the atomic aspect in which MAGNETISM brings into play its activities within the operational functions of the play of body minerals.

It is in this study of the first activities operable in the cell, that we note the actions of impositional forms which might be at the bottom of the primal disturbance which brings on T.B. or pneumococic impositions found so prevalent in our basic picture of body disturbance and from which we note the developmental forms of better known disease formations, like rheumatic fever. If this is true then why cannot we use the OXIDATES of natural form which actually DESTROY ALL these formatives especially at their inception. We have had experience enough with them to KNOW that they will, so why fight against their use? The electronic negatives are the upsetting factor in the development of ANY metabolic disturbance AND we are becoming familiar with the knowledge that a full mineralization PLUS a full oxidative supply will obliterate ALL negatives, for only by the POSITIVE polarity energies can the negative energies be made impotent and non-operative. That is the way we are designed NATURALLY and by the CREATIVE LAW. So we recognize that our met-

abolic processes are fundamentally under the control of the OXIDATES. Our best ADJUNCT boost to curative efforts, otherwise used, lies in their use. ALL dominated by the LAWS of NATURE. LAWS are to be followed because they are the *backbone* of true science and we must aspect them rightly or we cannot attain GOOD results harmonious to the LAWS governing body operation. A close study of the laws governing natural processes have been sadly neglected especially in visioning its two operating paths . . . the one creative and the other eliminative or destructive. (I refer to the flow of energies in that which governs the life principle.) The old adage of "Elimination is the secret of health" told us in our school days, has been sadly aspected by our medical devisers. Here is an aspect even the ELECTRONIST can profit through or by. DIAGNOSIS has become the "stumbling block" to today's progress because of man's many false conceptions of the LAWS governing metabolic processes. The WAY in discovering what is wrong BEFORE treatment is undertaken, is where the doctor is handicapped because of his unfamiliarity with the knowledge of the CREATIVE LAWS which govern the metabolic processes in our UNIT organism, the human body.

Will you find in ANY school of learning, the study of the place of magnetism dominating the pull of or flow of sustenancial substances to their appointed sections in the metabolic action? What takes place in the lung between the atmosphere and the blood as they come into their juxtapositional relationship? Their ELECTRONIC reactions? The negative and positive reactions as they apertain to gases and the atomic structures of the blood? What is stimulated at the other extremes to make the constructive energies contained in the blood, to pass through the blood vessel walls and flow in the direction they do toward the cell and what draws ONE material into the cell and what draws the other OUT of the cell? What, after it gets in the cell, draws it to either the electronic flowing material and the other to the meson of the nucleus? What seems to be the LAST stage of those actions pertaining to the breakdown and elimination of the factors making up the atom of the cell? Do you not agree with me that we need a NEW approach to what is ACTUALLY happening within our bodies? Do we not need a more enlightening aspect so that we can ATTACK those negative factors which are predominant in the aspects of what we call disease? I verily believe that the study of our OXIDATES and their action, will open up a NEW approach to the control of ALL tissue impositions brought about metabolically. Does it not seem reasonable to contemplate that a mechanism like the body which handles all tissue or organic operation which shows us that when rightly handled builds up a virile STRONG and HEALTHY
