

HISTORY OF MEDICINE

WHERE EVER A SYSTEM OF THOUGHT IS INVOLVED, LONG TIME IS REQUIRED FOR ADOPTION

HARVEY,- The circulation of the blood,

Semilweise,- Clean obstetrics through washing the hands,

Pasteur, Bacteria cause disease

Lister, Antiseptic surgery, 25 years and only one convert,- his assistant.

Morgan, Anaesthesia

Myself,- The tissue oxidations involve auto-induced oxidations depending upon the activity of the carbonyl group in favorable position, as, when conjugated with ethylene, or acetylene, when present in a ketene arrangement, when in series with ~~monomym~~ adjacent carbonyl groups. Theoretically started in 1912, practically applied in 1918, supported in 1943 ~~Woodscycle~~ ^{Woodscycle} ~~by fluorescence and photosensitization~~ ^{ity.}

Myself,- Boaden the conception of allergy to have a real meaning, - uncontrolled hyperactivity not under physiological control, hence an abnormal foreign transfer agency. The basis of Allergy is focal infection, scared in for protective isolation, but poisoning body over long periods, causing allergies and tissue changes. The MECHANISM of Allergy is energy transfer to tissue functional elements by means of toxins that should be oxidized in a fully healthy body but are not in the allergic person.

Among these allergies are cancer

The cure of allergy depends upon the cure of the chronic infection, regardless of the type, including cancer.

THE CURE OF THE INFECTION is the restoration of the auto-induced oxidation system that is lacking and this is a deficiency of the auto-induced oxidations involving carbonyl groups as stated above.

placed Fumaric acid

SUPPORT was lacking until St. Georgii, 19 ~~Warren 194~~ Woodscycle's active members contain it. - autooxidation of ascorbic acid destroys cancer causing poisons. through induced oxidation in vitro, thus confirming my theory.

Hunter and Leloir, 1945, showed that the detoxication of aceto-acetic acid was accomplished by the ~~mmh~~ oxidation of bodies containing the conjugated carbonyl ethylene systems, the energy of which supported the conversion of acetoacetic acid into citric acid, which is non-toxic.

Geiger and Conn, 1945 showed that the conjugated systems of carbonyl and ethylene which are found present in the known antibiotics that kill both Gram positive and Gram negative germs, are responsible for this action.

Mueller and Pusch, 1945, showed that the autooxidation of lipids/induce the oxidation of carcinogens, which makes them NONCARCINOGENIC. ^{linoleic, etc acids}

THUS NO SCIENTIFIC SUPPORT EXISTED BEFORE THE INDICTMENT AND THE PROFESSION WAS NOT YET TAUGHT BY PENICILLIN THAT SUCH MIRACULOUS CURES WERE POSSIBLE. THEY WERE NEVER SEEN BEFORE. NOW THAT WE HAVE SCIENTIFIC BACKING AND THERAPEUTIC EXAMPLES THERE IS NO REASON TO HOLD BACK WHILE IT IS EASILY UNDERSTOOD BEFORE. FISHBEIN STATED THE WORDS WERE GIBBERISH. HIS ADVISERS COULD NOT UNDERSTAND THEM ANY MORE THAN HE.

The commercial aspects of the opposition,-

may not be admissible

Q,- Compare three recoveries out of seven cancer cases, far advanced chosen by the W.C.M.S. with the three out of five infection cases that engaged the interests of American Drug industry to spend millions of dollars on Penicillin manufacture, perhaps 25 million.

What factor would have to intervene to prevent such interest?

A,- The fact of the recoveries would have to be discredited by someone in authority, or the privilege would have to be denied.

Q,- Has there been any discredit by anyone in authority ?

A,- Yes the A.M.A. journal has repeatedly denied this fact and an organized opposition of unidentified origin has been busy among the profession and laity.

Q,- Give an example of the A.M.A. Journal opposition.

A,- Many articles including that which tells of their efforts to get the Government to DO IT.

Q,- Tell some effort on the part of the laity in this regard.

A,- The district attorney's wife who went to Beauty Parlors to tell what a bad man Koch was and that they were going to railroad him to jail.

Q,- Political cooperation, James Couzens promised to aid treatment if test showed any useful results, yet denounced it and showed no interest after results appeared and was so advised .

Q,- How would any pharmaceutical company dare enter this work with the cards stacked against it

Q,- To what degree did that go ?

A,- In the last trial jurors were told by the chairman that they were ordered by their government to return a conviction. Thus an ultra lot of guts is not too much for them.

for developing

Q,- What tools were needed ~~for~~ the scientific work that removed obstructing errors ?

A,- It was necessary to develop the tagged or rather radioactive carbon atom .

Q,- In what way did the development of the radioactive carbon atom aid in research that gives scientific support to your theory ?

A,- Through the use of carbon 13, and carbon 11, it became possible to show that the system of oxidation of sugar in the body set forth by Krebs was erroneous, and a cycle that employed the active groups of our theory was adopted,- namely the Woods cycle.

Q,- Please explain carbon 13 and carbon 11, give a graphic illustration, (atomic bomb) tell how it works in doing this experiment, and how it works in the atomic bomb, the matter of concentration etc. Its relation to the atomic bomb etc.
