

## Michigan Dairymen Speak Out Against the U.S. Government

During the past few years we farmers have observed the action of a Remedy for two of the greatest curses to the dairy business, mastitis and infertility. We have watched this Remedy quickly and inexpensively restore diseased dairy cows to good health and good milk production. We have also observed a splendid increase in the reproductive capacity and the general health of the animals that have received this Treatment.

Similar observations to ours have been carried out on a large scale by the Department of Agriculture of the Government of British Columbia and the University of British Columbia, as well as various dairy associations and the veterinarian groups there. This has gone on for a period of five years with annual reports that have been most favorable. The final report announces the surpassing efficacy of this Treatment and shows that diseases in cattle can be wiped out in a major way, if not completely, by this Remedy.

Our Federal Government has resisted the introduction of this Treatment. The Federal Trade Commission has enjoined the inventor from advertising temporarily over the last seven years while they are looking around to find a cause for a permanent injunction.

The Food and Drug Department has falsely attacked him on trumped up charge about his label and have indicted him as a criminal, they have spent many millions of dollars to convict this benefactor, but they have failed. In the last months, they have been going about the country trying to trump up something upon which to start another trial. We protest these actions. We consider them highly criminal.

In the first place the Doctor's label is a good label that any clean thinking mind would produce for the purpose. It simply identifies the Remedy the Doctor sends to other doctors and the purpose for which it is to be used, giving the quantities, etc. The Government claims that this label virtually states that the Remedies *will* cure everything, every disease on earth, in every instance. As a matter of fact, the labels do not claim that it will cure anything or that it will help anything and physicians know that there is no such thing as a remedy that will cure everything. This interpretation of a label is far more criminal than raising a check because it deprives us of the use of this Remedy to keep our dairy businesses going in good order.

We suspect very strongly that some drug interests have representation in the Federal Government against the common interest of the farmer, and the health of our country. We, therefore, request two things: namely that the persecution of the inventor of this Remedy shall stop immediately and that the injunction against his telling the world what his Remedies are good for shall be withdrawn, and that this be done immediately!

We, therefore, solicit your immediate action in our behalf.
