THE KOCH TREATMENT FOR CANCER AND ALLIED ALLERGIES

A Sketch Of Its Theory, History and Present Status

by Meade Layne

Nearly three years have elapsed since the first appearance (1950) of this booklet, and during that time the Koch treatment has made notable progress in public recognition. Although for obvious reasons no exact figures are available, according to our best information some 4000 doctors throughout the United States are now administering it, on occasion and with such discretion as seems advisable to them. Several conventions have been held -- of which, however, the press took no notice -- numerous papers presented and at least two books published in this country alone. And at least one other publication, widely circulated, has continued to publish monthly reports of fully documented case histories involving the successful use of the Koch therapy.

As a logical accompaniment of this progress, the campaign of abuse and intimidation has taken on a new vigor in the press and in publications subservient to the influence of organized medicine; while at the same time the public has been mulcted of some \$15 million in the interests of "cancer research", which so far has produced no results whatever, and only a fifth part of which can be traced to any truly humanitarian activities.

The distinguished originator of this treatment, William F. Koch, M.D., Ph.D., continues to reside in Rio de Janeiro (1953), where the government has provided him with every facility for his studies and activities. In South America and on the European continent he enjoys the highest reputation, though practically forced into exile by the jealousy and ignorance of his own countrymen. Yet even here, as has been said, the Koch therapy gains ground daily, and the treatment has been improved in various details. Many physicians, too influential to be intimidated, are now employing it openly and with most marked success.

No further explanation is needed to justify the reprinting of this booklet, which has been widely circulated and which has, we believe, served a good and useful purpose. Like all publications of the Research Associates, it is offered for public information and service and not as a commercial enterprise. And the factual data in its pages is drawn from records which are still accessible, and well known to those who have interested themselves in the matter. These do not, unfortunately, include the rank and file of the American medical profession. The facts are therefore not news, but they may well be new to many who pay with their suffering and their lives

for the ignorance of those who profess to aid them. Nor have the facts in this booklet been sensationalized in any way, since they are in themselves sensational as any victory over pain and lingering death. As startling as the conquest of the "incurable" diseases -- cancer, tuberculosis, leprosy, and their allied allergies. Facts which to millions of the afflicted are like the rainbow above the flood -- once they are made known; and other facts, adverse and destructive of this hope, which are black as a conspiracy against humanity and God.

The first page of this booklet, in its original issue, has been replaced by this introductory note, and from that point it continued by means of hypothetical questions, addressed in old fashioned style, if you please, to Mr. Abel Reeder -- whom we believe to be an able reader indeed, if this matter in any way comes home to him. He takes the stand then, and the interrogation begins:

Let us suppose and assume, Mr. Reeder, that for nearly three decades past a SUCCESSFUL CURATIVE TREATMENT FOR CANCER HAS BEEN KNOWN. Let us suppose an agent has been discovered and prepared, which when properly employed results in the total and permanent disappearance of cancer, and of cancerous and tumorous conditions. Let us assume that among patients treated for the afflictions and mortality rate is reduced by at least 85%, exclusive of deaths due to other causes and to the natural termination of the life span.

Let us assume that certain revolutionary discoveries have been made in the field of biochemistry and that these render the action of this agent scientifically intelligible and furnish a complete theoretical basis for its remedial action. Let us agree that this substance is chemically described as a catalyst, the molecule being $O=C=C=O$, and that its action is to restore the oxidation mechanism of waste products of the body. Hereafter we shall refer to this agent as the catalyst.

Let us accept that, as alleged, experiments with this catalyst were continued for more than ten years, in the United States, Canada, Africa, Europe and South America, and with striking success, not only in cancer but in leprosy, tuberculosis and the dreaded Wild Fire of the upper Amazon, which has a mortality rate of 100%.

Let us assume that it is true, as the record discloses, that the discoverer of the catalyst, William F. Koch, M.D., Ph.D., and all his collaborators experienced and still experience the greatest difficulty in making these facts known to the public and to the medical profession, and that he and many of his co-workers were and are stigmatized as quacks and charlatans. Countless obstacles were raised against them. Trickery and violence were often employed, money expended, and every possible legal recourse and device resorted to, to suppress the knowledge and use of the catalyst, and to obstruct and discredit those who sought to use it in the treatment of disease.

Let us assume that it is true and provable by court records that

this persecution stemmed from individuals and cliques within organized medicine and within the leading medical association of the United States, and that it is true that it was and inspired by greed and professional jealousy -- since the revenues derived from the present treatment of cancer and other diseases of a deadly nature are very great.

Let us further assume that it is true, as alleged, that the catalyst can now be prepared by synthetic methods from a wellknown substance, refined glucose, that it is inexpensive, and that although its preparation is difficult it can be administered by any doctor who will obtain the necessary instructions and observe them with meticulous exactitude. That the general use of this catalyst in the proper manner would eradicate all of the most deadly diseases which current medical practice does little more than alleviate. . . and that it is true that medical men familiar with the facts believe that this suppression and persecution are a disgrace, and a crime against humanity and against science. Assuming and supposing that all these alleged facts are veritable and true, and these allegations made as described, what would be. . . etc. . . etc.

This pseudo-legalistic jargon has served its purpose, I think. And now that we have run away without quoting Mr. Abel Reeder's answer, or even finishing our hypothetical question, we are going to interview very briefly, a distinguished friend, Dr. Cotton Smith, M.D. (a nom-de-guerre, of course). This doctor has a brilliant academic career and professional record, was formerly an instructor in biochemistry in a class-A university medical school, and was intimately associated with Dr. Koch and the development and use of the catalyst during the past ten years.

A.R: "I take it, doctor, that you have observed the effects of this catalyst in many cases, and have used it in your practice, and are convinced that cancer can be successfully treated by this means?"

Dr. C.S: "I have used it and studied it exhaustively, and am willing to say unequivocally that all types of cancer, in all forms and all stages so far as my knowledge goes, can be successfully treated by this means, and with out recurrences, as well as a large number of other diseases of most serious nature, and with restoration to normal in almost every instance."

A.R: "That is a very strong statement, doctor, perhaps a few definitions would be in order. How would you define cancer?"

Dr. C.S: "Cancer is a lawful growth, not an 'anarchy of cells', which has resulted from a piling up of incompletely oxidized body products, all of which contain nitrogen. The natural immunity has dropped for some reason, usually some other sickness, injury, debility, or advancing years; and this limits the available immunity factor so that it is not sufficient to clean out the waste products and keep the body properly protected."

A.R: "The 'available immunity factor'? Will you explain

what you mean by immunity?"

Dr. C.S: "Immunity is a condition depending on the presence in the body of several chemical substances. It is a condition in which the concentration of these is maintained at the right point. These substances keep up the burning or oxidation of waste products at a normal rate. Diseases deplete these factors, thereby allowing some form of illness to step in. The prompt administration of a nascent catalyst restores the order or reverses the trend."

A.R: "In other words, the sequence is that toxins accumulate in the system because certain chemical reactions in the body are retarded. This retardation comes from some sickness or injury. The waste products then are not oxidized and accumulate in definite areas of the body. This is called lowered metabolism, and it may and often does result in cancer. Is that approximately correct? And what about the apparent connection of cancer with injuries or continued irritation of any certain part?"

Dr. C.S: "Yes, that sequence is approximately right. And where cancer appears to result from injury or irritation, its real cause is the accumulation of toxins at the irritated place."

A.R: "You used the term nascent catalyst; will you explain what is meant?"

Dr. C.S: "Some substances will produce or hasten a reaction merely by their presence, without any apparent change in themselves; these are called catalysts. An element is said to be nascent at the time it is being liberated from combination with something else. Its chemical activity is then greatly increased."

A.R: "Then the substances used so successfully in the treatment of cancer are nascent catalysts. Will you tell us something more about them?"

Dr. C.S: "They are synthesized from an ultra-pure glucose through a highly technical system of chemical transitions. The most meticulous cleanliness must be observed, otherwise the catalyst, being an oxidizer in a dilute solution of 1×10^{-14} , would be spontaneously destroyed. The slightest impurity in the atmosphere, such as smoke, dust or foreign gases, will neutralize the results. Practically all volatile substances will do this. I have known a minute leakage of gas in a kitchen to have this effect on a patient. It has been necessary not only to use the ordinary air filters, but to go into areas remote from cities and manufacturing plants.

"The resultant injection is sealed in a brown glass tube containing 30 drops (2 cc) and then the injection is made immediately following the removal from the ampule. A very noticeable shaking of the body occurs immediately and may last three or four minutes. If the body is in good condition there is little pain, but if it is burdened with toxins the pain is more severe. Adverse effects from these injections are unknown to me -- they are absolutely harmless. A singular fact also is the complete disappearance of scar tissue (from previous cancer operations, presumably) following the healing."

A.R: "Returning to your personal experiences -- when did you first hear about this treatment, doctor?"

Dr. C.S: "About 1937. I first learned about it from a prominent doctor in Seattle. I went east and began a course of intensive study, returned to the west coast in 1938, and began to use it on my patients in cases of cancer, tumor and infection with a high degree of success. Next year I returned to the east for more detailed study and afterwards used it with even greater success. The following spring I became intimately associated with Dr. William Koch, the originator and sole discoverer of this treatment, and made many trips with him throughout the west coast in the interests of his discovery. It was in 1935 that the treatment was used in foreign countries, England, Belgium and Brazil."

A.R: "In passing, doctor, will you comment on the use of this treatment in the Amazon area."

Dr. C.S: "Numerous 'incurable' diseases were met, especially the strange endemic disease known as Wild Fire. This was checked immediately within the area of treatment on the upper Amazon. In the Belgian Congo, where Dr. Koch had gone with Dr. Maisin, head of International Cancer Research Institute, leprosy was successfully treated. In two months use of the treatment, 87% of cures resulted. And Dr. Koch took the treatment himself when he was stricken with the dread Mediterranean (Malta) fever. This was only one of many cases in which Dr. Koch used himself as his own guinea pig."

"During 1942 and '43 I lived in Dr. Koch's home and worked with him long hours on intricate details of the treatment. In 1943 he was attacked by his enemies for refusing to prostitute his discoveries to commercial ends -- although he offered his preparation without cost to his colleagues. He personally offered it to the Surgeon General of the United States Army at the beginning of the second world war, but it was 'contemptuously' rejected. And in spite of Dr. Koch's successful treatment of leprosy in other countries, he was denied admission to our own leprosy colony in Louisiana."

"Legal proceedings were then instituted by the United States Food, Drugs and Cosmetics Administration for alleged violations of the Food and Drug Act. Thirteen Federal indictments were brought; the trial lasted about nine months and ended in acquittal. It was my privilege to act as the first defense witness at the trial. Here I saw doctors of prominence from all over the world offering voluntary testimony in Koch's defense -- about 600 in all, but due to lack of time only about 60 were called to the stand. My knowledge and use of these new chemical elements of life-saving quality have continued with marked success. I should add that diabetes and leukemia are other diseases in which the preparation is used successfully."

"The Koch treatment is now being successfully employed in almost all European and South American countries (1950) as well as in Asia. Only in the United States have sufferers from these diseases been denied the benefits of this treatment. But even here, in spite of the use of legal injunctions against it, the use of the Koch treatment is rapidly spreading." (See Note A, Page 18)

A.R: "And this is the man who prominent physicians and the government prosecuting attorney have repeatedly described as a quack and an impostor! Can you tell us anything about Dr. Koch himself?"

"For 400 years the name of Koch has been outstanding in medical work. The tuberculosis germ was discovered by his uncle and numerous members of the family have made permanent highlights in the cure of disease, both here and in Germany. Dr. Koch himself was Professor of Chemistry and Histology for 15 years at the University of Michigan Medical School. He resigned this post to engage in the research work which has won for him the characterization of 'the greatest living doctor' and 'a modern Pasteur' -- phrases of the distinguished head of the Dow Chemical Laboratories.

"To date all available information FAILS TO REVEAL ANY KNOWN DISEASE THAT IS NOT CONQUERED BY THIS PREPARATION WHEN PROPERLY ADMINISTERED. But, as I indicated, a long and meticulous training is necessary. The remedy cannot be administered successfully by one not highly trained in its intricacies. This informant will furnish positive proof, either thru the sworn testimony of patients, or documentary evidence of the truth of these statements.

"It may be well to point out here that Dr. Koch's thesis is that Nature is trying to produce an organ in the human body that will produce this catalyst now provided by the Koch injection. Only ONE injection is usually required, occasionally two, and in rare instances, three.

"Dr. Koch has also developed a technique whereby, thru intricate blood tests, he can predict with reasonable accuracy whether an individual will have cancer, and if so, approximately the time. This technique, however, is still in the earlier stages of confirmation. The test turns upon modification in the sedimentation rate of the blood."

A.R: "Can you tell us a little more of the results of the Koch treatment in tuberculosis?"

Dr. C.S: "Over the period of a year more than 80% of far advanced tubercular cases treated with this catalyst recovered. The recovery process is cyclic and follows certain high laws of the cosmos. So does the development of cancer. Cancer, curiously enough, develops in conformity to a mathematical principle involving multiples of seven. In the simplest aspect, as illustration of this, a cancer will be active for one day and quiescent for the next six. This same strange phenomenon is also seen in the reverse action. In the words of Dr. Koch, 'the last to come are the first to go'."

SECRET PROCEEDINGS OF THE CANCER COMMISSION

The "In Camera Proceedings of the Cancer Commission, Ontario, Canada, 1938-39-40" is a volume of 395 closely printed pages covering the presentation of the Koch treatment, with explanatory notes by Dr. A.H. Arnott. The committee had been appointed under an Act of the Ontario legislature, for the investigation of cancer remedies. "It is brutal," said Premier Hepburn, "to keep secret any remedy which might be helpful to cancer patients."

But this record of In Camera (secret) proceedings would never have been accessible to the public except for Dr. Arnott's initiative in publishing. It is packed full of the most amazing facts drawn from case histories and presented as sworn testimony to the Committee, and it is also a most distressing record of the shifty and evasive attitude of the officials concerned -- an attitude certain to awaken in critical readers a suspicion of powerful and hostile forces.

Concerning Dr. Arnott, there is a lengthy paragraph on pp. 40-41 of the Proceedings, detailing his degrees, honors, and medical achievements. His experiences with cancer taught him that the principle of "having patients operated on early enough to ensure success" is "an academic stipulation for which there is no practical application". And further, "Where the first operation fails to eradicate the disease any subsequent operation must prove worthless to the patient" (p.41). -- these second operations, in fact, being almost always fatal. Dr. Arnott soon embarked on an exhaustive study of Dr. Koch's treatment, collaborated with him in two works dealing with natural immunity and its chemical basis, and was otherwise closely associated. He also was intimately associated with Professor Maisin of Louvain University, Belgium, head of cancer research there, and perhaps the best-known world authority on this subject. We digress here long enough to quote Professor Maisin's statement to him:

"Dr. Koch's formula is a new method of treating disease. It is opening the door to the development of immunity to disease. The Koch formula should not be called (merely) a cancer cure. It is a very important step in medicine and is likely to change the whole picture of medicine and pathology."

Such a man weighs his words with extreme care -- and the statement we have quoted is most remarkable, and deserves our closest attention. What we are dealing with in the Koch formula is basic and revolutionary and changes the whole picture. It is a new method of treating all disease. New chemical substances have been discovered and a new chemistry must be learned and applied. It is difficult for the layman to understand what this means for the chemist or physician imbued for decades with established concepts of organic chemistry -- what a long and bewildering task is set for him. Where the opposition to Koch has been honest, much of it has stemmed from this fact."

"There is no such chemistry, no such substances and reactions -- imagination -- invention of quacks" and so on. This is the familiar combination of mental inertia with fanatical devotion, either to a credo or a non-credo. This Koch treatment and its vindication is more than victory over cancer, tuberculosis, syphilis, leprosy, Malta fever and related allergies, magnificent as such achievement is. It is the bell-note of a new era -- if so much of a future is granted to our race. But as yet, who realizes it? Who is awake? Until we awaken and realize, neither this nor any other high event is really ours.

Let us go back to Dr. Arnott, talking to Commissioner Deadman, from the "Proceedings of May 18, 1939": "Here is what it is. There

has been great difficulty in deciding on the best thing to do and that is what has taken all these years. Sometimes the thing would work like magic on one kind of cancer and not on another, and then variations took place in different parts of the country. It was very confusing. Dr. Koch came to the conclusion that the molecule that produces cancer because of its bulk and shape is vulnerable at three different positions. When the carbon and oxygen atoms do not go on to their destination burning up into the form of water and carbon dioxide, they clump together and form polymers. They are the same thing but they are inert in that form. These big clumps do not go on; they stay around. They stick to the surfaces of cells. Energy radiates from the cells doing the business of the body and it is supposed to have no obstruction (just what Georges Lakhovsky had said twenty years earlier in Paris, in his electro-magnetic approach to cancer), but when these polymers stick in the surface the energy is echoed back into the cell and re-echoed. Then you have the functions of the cell out of control, a normal thing but out of control. To get the function of the cell back to normal you have to burn up these polymers. . . Yes, Dr. Koch demonstrated these things in the laboratory. He is a chemist, a crack chemist. He has a Ph.D. and majored in bio-chemistry."

CLINICAL CASES FROM "PROCEEDINGS"

Case of Anna Ralph: Endarteritis obliterans. Record includes rheumatism, valvular heart trouble, cystitis, an automobile accident. Left foot black, cold, skin for 9 in. up leg dark red and mottled. 1 cc. glyoxylide, Feb. 7. Foot warm and normal in 10 days. Entirely normal fourteen months later. (This was inflammation of the artery. "When it occurs in the artery supplying the muscle of the heart you have coronary thrombosis, and these severe cases get better just as quickly. Arnott).

Case of Mrs. Ella Drews: Cancer. Abdomen invaded widely 2/3 invaded by lobulated mass; liver and stomach involved; extension into the brain. 1 cc. glyoxylide given May 15, repeated Oct. 8 (1924). Health completely restored in one year. Alive and well, April 1939. Became a champion bowler. Case had been pronounced hopeless by Grace Hospital, Michigan.

Case of Rita Long. Age 3½. Glioma (cancer) of left eye. Eye removed May 1933. Glioma of other eye in 1935. Koch glyoxylide given Nov. 25, 1935, 1 cc; second treatment Aug. 18, 1936 -- at which time she had gained weight. The cancer disappeared, sight normal, child in school, no glasses necessary. Nov. 21, 1936.

Case of Mrs. George Grove. Lymphosarcoma, recurring rapidly after surgical removal. Quickly brought under control by the Koch treatment; patient alive and well May 18, 1939. Treated May 19, 1937. The Handbook on Cancer of the Canadian Cancer Control Society asserts that cancer is a group of diseases, and that there is no relationship between lymphosarcoma and glioma. Yet in both cases there was recurrence after surgery, and both were completely cured by the same basic treatment -- which certainly strongly suggests, even if it does not prove, that there was a strong basic similarity. Lympho-

sarcoma is a galloping cancer, so-called, and very deadly.

Case of Abram Johnson. Cancer of the mouth, hard and soft palates and under jaw area. Completely cured in seven months.

Case of Mrs. C.W. Meff. Cancer of the breast. Extensive operation followed by X-ray. Recurrence 1½ years later with extension to other parts. Koch treatment given Sept. 1926; recovered and was in good health in 1939.

It is easy, very often, to discredit an alleged cure in a single case, or in a small number of cases. Faulty diagnosis can be alleged, and/or many other circumstances which confuse the issue and cast doubt on any single alleged cure. Workers in psychic research, which has its pathological side, understand this situation quite as clearly as medical men; there is no such thing as an *experimentum crucis*, either in medicine or in psychic research. But in this volume of Proceedings the case histories go on and on for some 400 closely printed pages! They cover not only the successful treatment of cancer but of many other diseases and allergies.

Estimates place the reported number of complete recoveries from cancer and other "fatal" allergies, during the last 12-15 years, at more than 500,000 -- including 600 in the Amazon region and 400 of leprosy in the Belgian Congo -- the whole number being attributed directly to the Koch treatment. Such is the "quackery" which his enemies have slandered for their personal gain!

The factor of the wide range of application of the Koch glyoxy-
lide is most astonishing at first thought; nevertheless it could have been predicted from the basic theory. And that these results actually ensued is conclusive proof that the theory is essentially correct. At the risk of dullness, let us look into the theoretical side a little further.

"LEAST COMMON DENOMINATOR IN ANTIBIOTICS"

Albert L. Wahl, M.D., C.M., in addresses before national and international medical groups in 1947, printed in the same year, sums up in part as follows:

"Many departures, if not all, from normal physiology, are believed primarily due to a deficiency in the oxidation process of the body, leading to the accumulation of fluorescent toxic (poisonous) molecules. . . which would ordinarily be burned in normal metabolism (but) which become absorbed in the colloidal system and act as antioxidants.

"They absorb the energy of the cells and reradiate it into certain other functional units capable of receiving it, and these units are stimulated beyond control. Immunity hinges on normal oxidation and normal metabolism. To restore it, the antioxidant must be destroyed. To do this a chain reaction must be set up, in which the oxidation catalyst acts as a carrier and the toxins are reactors. The introduction of oxygen into the molecules of the toxins is equivalent to detoxification. . . The entire abnormal hyper-functioning system

cancer or other disease) then collapse!

"The conjugated system of carbonal and ethylene linkages found in the parabenzoquinone (the Koch remedy) is believed to be the least common denominator of most of the antibiotics. It is also present in vitamin C and K, and potentially in E, and is believed to be the active radical. It is also present in testosterone and progesterone and is thought responsible for their anticarcinogenic (anti-cancer) activity. The same vital radical is believed responsible for the action of streptomycin and the sulfa drugs. . .

"The author has treated approximately 250 cases with parabenzoquinone 6x (1 to 1,000,000). Usually one 2cc dose is all that is required. The age range of the patients is from 5½ months to 97 years. The cases include acute and chronic infections, allergies, and anthropathies, glandular dyscrasias, leukemia (with a related oxidation catalyst), Hodgkin's disease, Raynaud's disease with gangrene, and neoplasms. Results in all cases have been promising.

"I have seen more cures of so-called incurable conditions with this treatment in less than one year than I ever expected to see in my lifetime! . . . the high dilution, the single dose, the retrace type of recovery pattern, the similarity between the carcinogenic and the therapeutic molecules, and the ability of the latter to reproduce the disease when employed in a different potency and administered daily -- all seem to place this treatment under the Law of Homeopathy (the Law of Hahnaemann)." (p.36-37)

Further comments on the basic chemistry cannot well be introduced here. But see Note B at the end of this article, and the books of Wahl and Koch mentioned in the short bibliography.

FURTHER VOICES OF THE DEFENSE

The history of the Koch treatment and its epical struggle for recognition is perhaps the most remarkable chapter in the history of medicine, and not least in the records of the whole age-long struggle for human enlightenment. In a large sense, and in essential aspects, this battle has now been won. The Koch treatment, in theory and in practice (though often under different names) is now widely known throughout Europe; and the collapse of the attack on it in this country and in Canada has left the field fairly clear, although certain proceedings which impose restrictions are still pending in the Supreme Court. Still, the situation in detail and in the the United States remains very bad. Physicians who have grasped the theoretical side and who are also technically competent to administer the treatment are comparatively few, and those who will take the numerous professional risks (of criticism, hostility, and active interference) are fewer still. This situation can be remedied, slowly, by the pressure of public opinion. Let the masses of our people realize that a cure for cancer, for tuberculosis, leprosy, syphilis, leukemia and a number of other dreadful diseases is actually known and in use, then the voices of the afflicted millions and of all who fear and suffer with them, will not be denied.

Physicians will be compelled by such public pressure to perfect themselves in the required techniques -- either with or without endorsement of medical organizations. Obscurantism is always undermined and destroyed by right knowledge, provided some vital interest is involved which will give motivation for the attack.

Because the knowledge of the Koch treatment does not really exist for the public at large, but has been slurred and slandered, and obscured by technical verbiage, Round Robin makes its minute contribution in the form of this article. Not to prolong controversy nor to incite it, but perhaps to hasten its end in some small measure. I feel that RR readers and our BSR Associates will want at least a sketchy outline of the whole picture, the entire situation in substance, if possible, before investigating for themselves, or forming even a tentative opinion.

The paragraphs which follow are partly controversial, but they are quoted with intent of enlightenment only. The reader has a right to hear these voices raised in protest, and to know who has spoken both pro and contra in so desperate and vital a cause.

THE LUTHERAN RESEARCH SOCIETY

The name does not indicate any official connection with the Lutheran Church, as stated in the publisher's imprint of this 64-page booklet of Dr. Wahl's "Least Common Denominator In Anti-Biotics". There is a brief forward reading as follows: "The Lutheran Research Society considers the paper by Dr. Albert H. Wahl one of the most important in medical circles in recent years. The Society feels the privilege to be able to contribute this paper to an intelligent public which has long been denied full details. . . we feel that it is a step forward in the right direction. We abhor and denounce with all the vehemence at our disposal the monopolistic groups which have denied the use of this healing chemistry to mankind for many years. We are not unaware that criticism and discussion will result. . . we only ask in the name of suffering humanity that those so ready to condemn -- and Dr. Wahl was one of those a few years ago -- take time to investigate. . . The thankful hearts of those who benefit are a warm repayment. . ."

On his opening page Dr. Wahl writes: "In the philosophy of medicine the last word has not been said, nor is it presumed that the present writing encompasses the final dictum. But 'God has worked a new thing' and this new thing is substantiated by extensive clinical observations. The facts press hard upon our present concepts, not only of clinical pathology, but of the chemistry of immunity, and clamor for a revision of our philosophy of medicine. . . they force upon us the urgent necessity of revising our isolationist principles of disease concepts. . . the phenomena observed in this research have made the writer feel that he has never before practised medicine. . . the most startling element is the utter simplicity of the method of treatment, from which resulted unorthodox results in so-called incurable diseases. . ."

INTRODUCTION TO KOCH NATURAL IMMUNITY

If such a thing as a final, unanswerable argument for the efficacy of the Koch treatment of cancer be possible at all, the "before and after" photographs of this text should supply it. The pictured ravages of the disease are appalling; but the smooth, clean, unscarred, healed bodies of the patient are like a miracle of hope and blessing. Dr. A.E. Arnott writes the 14 pages of introduction to this small book (200 pp), and a few lines may be quoted here.

"The time for clear thinking and plain speaking about cancer is long overdue. . . that the condition is environmental in cause and local in nature, where surgery, radium and X-rays can meet the whole field of requirements has been proven doubtful. . . where the disease is a hereditary one, this same treatment must forever prove futile, since the patient has already produced children and often grandchildren. . . the FACT of supreme importance is, that advanced cancer in its major forms has disappeared without treatment, sometimes. This fact should direct all future research for a medical treatment. . . spontaneous and complete regression of a severe type of cancer has been observed by me. . . and proved to me that the cure of cancer by medical means was possible."

Dr. Arnott recounts several cases of special interest in his early use of the Koch treatment: (1) Severe shingles in a child of 12, long arrested thyroid development. Complete and almost immediate cure. (2) Infantile paralysis, paralyzed four days, apparently dying; results "marvelous" and within ten minutes!! (3) Severe phlebitis, cure within a fortnight. Cataract of both eyes, vision improved over any experienced during "many years previous". (4) Severe coronary thrombosis; pain disappeared completely and finally within 3½ days. The patient was Arnott's brother.

"My brother and I resent the fact that the continued claims of surgery to domination in the diagnosis and treatment of cancer, successfully block the use of the Koch treatment in coronary thrombosis. . . no longer should we tolerate the study of cancer exclusively by laboratory workers experimenting with mice, nor permit surgery and radiology to monopolize the treatment of the disease. . ."

Dr. Koch was persecuted for "using a secret remedy" but the publication of the book "Natural Immunity" only increased the abusive comment. Nevertheless, the Journal of the American Medical Society for Sept. 27, 1913, gave extended editorial praise to certain researches by Koch. . . Some of the first cases treated by him in 1919 "are still alive and well" (1938). . . Many physicians have used the treatment with a recovery percentage ranging to over 80% in advanced malignancy cases. Recovery percentages depend partly on cooperation of the patient and the good judgment of the physician, as well as on the efficacy of the remedy. (In any recovery process there is, of course, a complex of conditions affecting both percentage and speed. The cooperation of the patient required the elimination of poisoned processed foods from the diet, giving up smoking and other common drug habits, removal of infected teeth, anything in fact which added to the overload of toxins in the system.)

THE FAMOUS DETROIT TRIAL OF 1943

The present writer has before him a page of printed reproductions from the Detroit "Times" of Feb. 6 to March 12, 1943, 16 in number, being headlines and articles up to a half-column; also similar reproductions from the Detroit "Free Press", Feb. 10 to March 19, 1943, 15 in number. Let us remember that these newspaper accounts are drawn from sworn testimony of witnesses in the Koch trial. We quote the headlines to give an idea of their nature and variety:

Three Cancer Cures put in Record at the Koch Trial -- Hospital Executive gives Case Histories as Defense Witness -- Doctor Testifies Koch Formula Aided 16 Cases -- Medication Cured His Own Infection, He Informs Court -- Koch's Medicine Credited as a Cure For Many Ills -- Tampa Doctor Defends Remedies -- Koch Medicine Credited with Rebuilding Lung -- Cancer Doctor Says Koch Cure Replaced X-ray -- Cancer Linked to Allergy by Koch Witness -- Malaria Added to Ills Claimed Cured by Koch -- Koch Remedy Cured Cancer, Nurse Says -- Koch Cure Claimed In Heart Case -- Koch Drug Praised by Nun -- Cancer Cured by Drug, Farmer, 80, Says. (Times)

Koch Cure Seen As Boon to Medicine -- Chemicals Destined to Alter Course of Practise, Florida Physician Asserts -- Koch Drug Credited in Heart Cure -- Girl's Eye Saved by Koch Clinic, Mother Says -- Texas Doctor Says Koch Drug Cured Half His Patients -- Koch Remedies Saved Her Life, Woman Says (cancer case) -- Koch Drug Cured Baby, Says Doctor (Eczema case) -- More Cures Credited to Koch Drugs (malaria cases, Arkansas) -- Koch Drugs Saved Her, Woman Says (cancer) -- Koch Medicine Cured Asthma, Doctor Testifies -- Says Koch Drug Saved Dying Boy (double pneumonia) -- More Cures Claimed For Koch Drugs (infantile paralysis and trench mouth) -- Koch Cure Called Good In Gangrene (cancer, heart disease, gangrene) -- Juror faints at testimony in Koch Trial -- (Free Press)

THE KOCH TRIAL

A blistering and devastating attack upon the government prosecution in the Koch trial, and on the attitude and tactics of organized medicine toward the Koch treatment, is the pamphlet entitled The Koch Trial, together with further Argument for Investigation Into Organized Medicine, by A. Fitz Roy Anderson. Sept. 26, 1943. The events of this trial are incredible, yet undeniable; for they are in the official records. This indictment of the persecution (our government), set down by an able and relentless hand, burns and lacerates by the mere recital of facts, of recorded testimony and the speeches of the government persecutor. We will not quote here, since everything in the pamphlet is about equally quotable, and though it is bitter and painful stuff it should not only be tasted but well bitten into, for the health of our own bodies and souls. I do not exaggerate. You and you and I have unspeakable enemies. If there are a million cases of cancer in the United States today, how many shall we say have suffered and died from this disease in 10 years or 15 years past? How many of tuberculosis? How many of these mil-

lions of dead might be alive and in health today?

If there is a certain and inexpensive cure, who is it that profits by its suppression? How large, in terms of millions of dollars, is the "take" of the medical profession from the prolonged treatment of cancer alone, by X-rays, radium, and repeated surgical operations, with an appalling percentage of failures as a result. These are commonsensible questions -- everyman's questions -- and the answer is obvious. (See Note E, end of this article.)

But does this cure exist? This present writer is convinced, that any intelligent and honest person who will collect the necessary data and spend five hours in the reading of it, will say yes, cannot possibly say no.

Though the charges against Koch were alleged violations of the Food, Drugs and Cosmetics Act, these depended on proof that the preparation offered for sale was not a cancer remedy. And this proof was not given. After a trial lasting nine months, costing the taxpayers millions of dollars, in which every resource of the Government was exploited to the full, the case of the prosecution was lost and beaten.

Whoever still alleges that the Koch treatment is quackery and fraud, must prove what the government of the United States, aided by the vast wealth and influence of organized medicine, was unable to prove. Yet a "temporary injunction" against Dr. Koch still pends in the Supreme Court, where it has been "temporary" for six years!

KOCH IN THE "CONGRESSIONAL RECORD"

On Monday, June 7, 1948, Senator William Langer of North Dakota spoke extensively of the effectiveness of the Koch remedies before the United States Senate. He began by stating that he has before him an article published by the Lutheran Research Society, entitled "The Koch Treatment"; that he has personally watched this treatment over a period of years; that it deserves attention; and that he asks consent to have the document printed in the Record. It was so ordered and Round Robin reprints here in part, with a summary of other portions.

The article begins by stating that the farmers of British Columbia are being saved millions of dollars annually through the control and eradication of virulent cattle diseases, such as Bang's disease and John's disease "thanks to the integrity and foresight of Canadian physicians, veterinarians and government experts.

"Be it known as a further warning against trying to suppress the truth, that farmers in the United States are rising up in indignation demanding the same advantages. Cattle raisers in South American countries, notably Brazil, have for years demonstrated the validity of the Koch treatment.

"In April 1948 members of the Michigan State Legislature petitioned Congress to investigate the injunction imposed by a Federal

Court on Dr. William F. Koch, Ph.D., M.D. . . inasmuch as recently discovered methods of treatment confirm Dr. Koch's research (etc. 25 signatures). Michigan farmers are not letting their herds die. They are using the Koch treatment anyway (although) injustice temporarily denies the learned physician the right of recommending Koch's treatment."

Quotations follow from Dr. Albert L. Wahl, Dr. Wm. J. Hale of the Dow Chemical Company, who calls Dr. Koch a "modern Pasteur", and Professor Joseph Maisin of Louvain University. The article then sums up the story of how the Koch therapy began to be applied to animals. The finest dairy herds were being ravaged, the Koch treatment was used and astonishing results followed. But "educational, scientific and administrative authorities took the position that such reports were fantastic". Practical men, farmers who had seen with their own eyes, "testified that results were being realized exactly as claimed. Their cows responded almost immediately". In a mastitis case, one dose was administered by hypodermic and "recovery was instantaneous", the cow's milk was being sold to the Creamery within a week.

"The Minister of Agriculture named a committee, field work was started in November 1944 and completed in Sept. 1945, with two laboratories duplicating and checking the results. These were nothing short of astounding. Everything that the Koch Laboratories anticipated came to pass, and the Government of British Columbia published the final report. It contained a summary by Dr. Arnott of the Koch treatment, and a commendatory final clause, 'that the observations justify the recognition of the working hypothesis of biological oxidation on the Koch treatment meriting its further use'."

The article read into the Record by Senator Langer then refers to the treatment of Cancer by the Koch method since 1918; but Dr. Koch "soon discovered interests existing in the United States which did not welcome discoveries from these deadly enemies of society to reach the public. Since that time he has had constantly to beat down opposition in order to continue his work for the relief of suffering humanity".

This is followed by a summary under six heads, of the fundamentals of the Koch science, and this in turn by Dr. Wahl's account of the recovery of his sister from lymphosarcoma by means of the Koch treatment, "disease regarded as invariably fatal" (Hodgkins disease). Wahl himself at that time opposed the treatment, but the father insisted on it. This disease is fatal in from three to six months and the patient was in the last stages of it, yet "she recovered after one dose, in characteristic fashion".

Nevertheless, "the American Medical Association is not yet convinced, after 25 years. But that is an old story." The article concludes with a biographical note concerning the distinguished record of Dr. Koch, and recounts some of the tributes paid him by well known writers and scientists.

Another eight-page brochure, "How The Koch Treatment Fights Polio", was issued by the Lutheran Research Society, Lawrence Reilly, Director, Box 3381, Jefferson Station, Detroit 14, Michigan. Under date of Aug. 5, 1948 a copy was sent to every Congressman. The letter by Dr. Reilly includes the following paragraphs.

WHY CANT DR. KOCH BE FREED?

"Read the enclosed record which is an extract from the Official Court Testimony dealing with Polio alone. . .

"Ask yourself what countless clergymen, physicians, and ordinary sick people have asked themselves, 'Why cant this man be freed to bring this marvellous work to the world?' Read of the sick and the dying, then listen, if you will be so kind, to the plea of our Society, of the Ministerial Federation of America, of the many letters from doctors which reach our office, and help look into this matter. It is not just for us that we ask; it is for you, your families, and the American people throughout the nation. We would like to know why the leaders of the American Medical Association who oppose all science not issued through their office, have the monopolistic power of influencing the Food and Drug Department and the Federal Trade Commission to continue active opposition to a great scientist whom even their records will show has really accomplished marvels in medicine. We have the evidence that this is the case. We consider it un-American and against the best interests of humanity. Please lift a finger to stop this type of activity where the life and health of the nation are at stake.

"The cases which follow are well confirmed. They will be included in a forth-coming book entitled 'The Birth of Science', written by two physicians and myself, giving the facts of the entire case."

To give an idea of the contents of this brochure, we quote headings only, or with a line or two of amplification. Each case, however, is described in its essential aspects in the publication itself. Each case is covered by the sworn testimony of the physician treating it.

*Bulbar polimyelitis, with extensive paralysis. Patient J.K., age 17. In last stages, terminating fatally. Almost complete recovery.

*Acute poliomyelitis. Patient W.N. 2½yrs old. Paralysis of both legs complete for 24 hours. Recovery within 24 hours. Now weighs (at 18) 180 pounds. Statement by mother included.

*Acute poliomyelitis with paralysis. Robert Lawhead, 8 months. Advanced state. Recovery within one week. No ill effects after 8 yrs.

*Same. Inman child. Case 6 to 8 days standing before treatment. Recovery in two weeks (Sept. 1941). At present in normal condition.

*Chronic poliomyelitis with paralysis and atrophy of three years duration. Patient, Myrna Robinson. Discharged by Warm Springs, Georgia Sanitarium without treatment, as beyond help. Casts and braces used.

A "really miraculous" improvement "in a few months. Does toe dancing now".

*Acute poliomyelitis with established paralysis. Leman Atkins case. Testimony of mother and patient included. Advanced case. Extreme pain. Age of patient not given, but was small child. Complete and rapid recovery.

*Chronic polio with paralysis and atrophy of 21 years duration. Mrs. Violet Nicola, age 23, statement by patient included. She was stricken at 18 months of age. Had 23 surgical operations; was constantly in cast or braces; could not walk unassisted prior to 1943. After glyoxylide treatment "I removed my braces within three weeks, discharged my full-time housekeeper, did my own work and made my visits to the doctor alone. I walk better now than I did then. I had three treatments. I am now married and have an adopted baby girl. I am a stenographer and bookkeeper, an assistant secretary to the California Auxiliary Highway Patrol and secretary to the Kern County Kennel Club. I have not had any other treatment, except vitamins, than the Koch treatment. I can dance and do dance. I do not wear braces or use crutches or wear specially made shoes. When I first went to Dr. Hendricks I weighed 89 lbs., I now have an average weight of 113 lbs. I feel perfect now. I am extremely happy."

REVERSING PATHOLOGICAL TRENDS

"Reversing Pathological Trends of Rheumatic Fever and Coronary Thrombosis", by D.H. Arnott, M.D. with "Introduction on Natural Immunity via Aerobic Glycolis", by William F. Koch, M.D. This is a 47-page booklet of which the introduction occupies the larger part. The first pages, though extremely interesting, are highly technical. These are followed by 37 case histories in synopsis; most of them cancer cases but including dementia praecox, shingles, psoriasis, polio, tuberculosis, syphilis, arthritis, arterial sclerosis -- all cases restored to normal health under the Koch treatment.

There is also a classified diet list; the diet is vegetarian, raw as much as possible. There is a thorough preliminary cleansing of the system and a removal of toxic centers such as dead or decaying teeth. Coffee, tea, pepper, other spices, turpentine and perfumes, nail enamels and cosmetics, canned foods, smoke and smoking, motor exhaust fumes and a number of other things must be eliminated from the environment.

A very interesting feature of cancer cases is their rhythmicity. Concerning the case of a 2½ year-old girl with malignant gliomata of both eyes, Dr. Koch writes:

"This child demonstrated mounting aggravations each day of the last quarter of the moon. This was the mother's usual menstrual period. With the next change of the moon the subjective symptoms improved somewhat, but the progress of the growths made during the bad period would remain stationary until the next last quarter, when another advance in the disease was made. The change was sharp and invariable whether the mother menstruated or not. I do not consider

this characteristic an environmental affair, well recognizing the fact that light reflected from large surfaces, like the moon and the ocean, is circularly polarized and can affect photochemic responsiveness. The rhythmicity is probably a part of the larger order of things which takes in the moon changes as one of the concomitants. However, environmental affairs. . . may set up variations of rhythm. The victim of cancer is a poor oxidizer and susceptible to any form of allergy. . . "

The section by Dr. Arnott includes seven case histories. "The real cause of rheumatic fever is allergy. . . For over two years I have been able to correct this allergy by using glyoxylide. . . "

ADDENDA TO "THE KOCH TREATMENT FOR CANCER"

Note A, page 6

Dr. C.S. at this point added these words: "Following the Koch trial a number of physical attacks were made upon me and intimidating tactics were employed. I was robbed and beaten in my office and on the street by assailants whose motives were clear to me. Similar attentions were paid other physicians who agreed with Dr. Koch. Needless to say, these measures are not effective in preventing our use of the Koch treatment!"

The expressions employed by Dr. C.S. in the above note are indeed models of restraint. Not only in his case but in a number of others, there is a record of terrorism and violence directed against the followers of Dr. Koch only. No cases have been reported of at- tacks on witnesses for the prosecution!

Among the former group there has also been one death from poisoning and one from being run down by an automobile, both victims being physicians of distinction and prominent in the advocacy of the Koch treatment. Mail has often been opened and cartons of certain chemicals often arrive empty -- but without any indication that government officials or any lawful agency were concerned! It is natural and inevitable that suspicions should be directed toward individuals or organizations or both, who have much to lose in the spread of the Koch treatment.

(Dr. Koch himself was the target of at least 13 unsuccessful attempts on his life, before his passing of coronary thrombosis at his home in Petropolis, Brazil, Dec. 8, 1967. Cannot we conjecture that this scientific disciple of the healing Forces of the Christ was protected from assassination and martyrdom by the heartfelt gratitude and thankful prayers of the thousands upon thousands of men, women and children who were restored to health by his medical science? I think so. RHC.)

MORE FROM THE "IN CAMERA SITTINGS"

Dr. J.W. Kannel, Ft. Wayne, Indiana, testifying before the Canadian Cancer Commission in 1939, gave some hint as to who "those individuals or organizations" might be, during his explanation of the effectiveness of the Koch Glyoxylides.

Commissioner Young: "I think Doctor Kannel will appreciate this. No matter how much we may be impressed by his evidence, which has been given in a very candid way, it is necessary that we should regard these cases judicially. Have any of your case records which were submitted in London (Ontario) or have been submitted today, been the subject of review by any investigating body in the United States?"

Doctor Kannel: "Not that I know of. As I understand it, in the United States they are adverse to Dr. Koch's theory and treatment. The American Medical Association and the Journal are controlled by Dr. Fishbein very largely, and there seems to be a great deal of prejudice over there. There should not be, but it is very evident to me, the way I have it figured out, that the immense investment in radium and X-ray equipment is something which may hold Dr. Fishbein in check, and cause him not to recommend that thing. So, they really disregard it over there, all they can.

"May I say this; that our Allen County Medical Association, of which I am a member -- our late Dr. Schroeder, who was a rectal specialist there, used the same Koch treatment, and they threw him out of the Society, because he talked too much about it. I do not say anything about it. I let them do as they please.

"We have another very broad-minded surgeon there, who is a great surgeon, and he and I have talked together, and he said, 'Doctor Kannel, if you are getting results from Koch's treatment' -- pardon me -- he said, 'Oh to hell with the rest of them, if they do not like it.'

"I try to be ethical. I do not want to incur the displeasure or enmity of the rest of the medical profession. I never advertise, but because I have cured through Koch's medicine Miss Lola Miller -- these people have come to me; many of them after they are almost through, and after they have seen every other doctor, and X-ray man, or a radium man, and these men say they cannot do any more for them, then they come to me. I have had three cases of cancer of the face, which when they came to me, the whole side of the face had been burned and sloughed out, and they died from haemorrhage when the jugular vein rotted off.

"But I cannot keep from giving them a dose of (Koch) medicine because they say, 'Doctor, you cured so-and-so, and I will tell them, 'I cannot do that for you; I do not want to take your case.' Then they will say to me, 'Listen, I want it; it is my last chance,' and then you give it to them. They say, 'Will you give it to me,' and what can you do? All I can tell them is, 'Well, if you want to go to the expense of trying it, I do not believe I can refuse you.' You have to give it at times when you know there is no chance, and that cuts down your percentages of recovery very largely, but out

of seventy-two cases there are twenty-one alive and well today, as far as I can find out. These others I referred to, who died a few years afterwards, I think made a perfect recovery from the cancer, but died in some other cause."

Chairman: "I think perhaps we had better finish up with Doctor Kannel."

Doctor Kannel: "Mr. Chairman, I feel very much encouraged since I have combined the (Koch) cancer treatment with my surgery. Previously to that I was very badly discouraged. Now, when anybody comes to me and I think there is hope, I can tell them so; but with the twenty-four year's experience previous to 1925, I could not offer any hope, because all my patients died.

Commissioner Valin: "You never saw a case of cancer of the breast cured by surgery?"

Doctor Kannel: "I do not think I have had any. I do not say I have seen any cases that were cured.

"I go to the Mayo's (Rochester, Minn.) about every two years -- that human slaughter house as I call it -- and I saw a man operating on five cases of cancer of the breast in one day. I asked him, 'Will this cure the cancer cases?' and he said, 'No, it will only arrest them,' and I said, 'What do you do following this?' and he said, 'Give them X-rays and radium.'

"I said to him, 'Then what is the use of mutilating the body.' and he said, 'Well, we do not know anything else to do.'

"You know, they operate up there for everything that comes along if they can make a diagnosis to that effect..

"Doctor Charlie Mayo is dead now, and William Mayo is dead. Charlie Mayo sent a patient to Koch because it was a case on which he refused to operate. He recommended the Koch treatment and said Koch had something he did not know anything about! (And didn't want to know! RHC) Because the man came in to me on his way back from the Mayo's and he said, 'Doctor Kannel, what do you think about my seeing Koch (probably practicing in Detroit at the time. RHC)? Doctor Charles Mayo said he could not do anything for me and recommended I go back and see Koch,' and I said, 'That is a good bet.'"

Doctor Arnott: "Was he a doctor?"

Doctor Kannel: "No, just a layman. I do not mean to be over enthusiastic. I would not for the world mislead anybody, but I think it is a debt we owe to humanity to give them the things which have been discovered instead of trying to discredit them, that is why I came here. If we could save one out of every four or five, we are doing well."

The Chairman: "From your experience, Doctor Kannel, do you think this treatment can wholly supplant surgery and X-ray and radium, or should it be used with that?"

Doctor Kannel: "I think the time will come when it will supplant X-ray and radium. I do not know about surgery because some of the

cases come to you when they are having haemorrhages, which require ligament to stop, and surgery will have to step in, to give temporary relief; but that does not cure the patient! You cannot cure cancer by cutting it out! I have determined that by experience, but you can clear up the toxemia in the blood by Glyoxylide.

"There was a question here about whether it was an infection, in connection with this other doctor's case (Dr. Candlish). Originally, I do not think it is infection until the tissue in the cancer growth breaks down and becomes permeable, and it can get all through the bloodstream, too. Then it is a real infection. Originally it was a toxin which produced the growth. It is nature's effort to make antitoxin in the body of the patient, but it falls short sometimes, because the cancer sometimes exists in the body for twenty years, but is not active. Why? Because nature has been able to create enough antitoxin to hold it in check, but it fails as we get older, and then Dr. Koch supplies the necessary antitoxin with his chemical composition. I do not know the composition of it. I am not especially interested in that because I am not a chemist, but I am thankful and willing to use it when we get results. That is all."

Note B, Page 14

"Time" Magazine, for Sept. 6, 1948, printed an ignorant and contemptible attack on Dr. Koch -- and then by some happy chance went on in the same column to remark that "the seven highest paid physicians in the United States last year had gross incomes up to \$180,000, and net incomes up to \$96,000. Physicians were in the top 3% income bracket. 2.8% of them grossed \$50,000 or more. The average income of all doctors was \$18,500 gross, \$11,300 net." Does this help to answer the question: "Who would profit by the suppression of quick and inexpensive cures of the most common and deadly diseases?"

And what organization is most vitally concerned with this matter, and has such wealth and power that lawyers cannot be found to bring actions against it? Only public enlightenment can bring this terrible condition to an end. We recommend the practise of several persons known to us, always to inquire of a physician: "Are you a member of the American Medical Association? If so, why?" If he admits but will not explain, tell him, "I cannot and will not employ you in any capacity whatever."

There are vast possibilities in this simple practise. If only the tribute-paying millions of suffering people would abide by it. We are fully aware that many honorable and competent physicians belong to medical organizations, and to one organization in particular for reasons of professional advantage and privileges, as well as various degrees of compulsion, and that many other physicians do not belong to any organization at all, preferring complete independence even at some disadvantage to themselves.

And we are aware that the most vicious practices arising in medical organizations originate with cliques and minorities. All of

CHARACTER ASSASSINATION

Below is a reproduction of the contemptible and scurrilous attack on Dr. William Koch referred to on the previous page. The late Henry Luce, publisher of Time Magazine, was the mouth-piece of big business and the lackey of the medical trust. The whores of journalism who made up his writing staff were available to the highest bidder, and there is no doubt who paid the price for this prize collection of filth.

MEDICINE

The Koch Method

Dr. William Frederick Koch pronounces his name to rhyme with joke. His patients have found very little to laugh at in his practice—which is bluntly described by the *Journal of the American Medical Association* as "Koch's cancer quackery"—though the families of his patients have often seen the point, too late. For years the federal Food & Drug Administration

(*TIME*, Dec. 10, 1934; April 20, 1942). In 1942 he and his office-manager brother Louis were indicted for introducing a misbranded article into interstate commerce. The jury disagreed. The second trial, in 1946, ended when a juror became ill.

For \$25 (sometimes a bargain rate of \$15), testimony showed, Dr. Koch sells a two-cubic-centimeter ampoule of a drug he calls "glyoxylide." Until the law began reading them, the labels promised cures for "cancer, allergy, and infection." Food & Drug accuses him of claiming to cure "practically all human ills, including . . . tuberculosis." Glyoxylide, according to Dr. Koch, is the "internal anhydride" of glyoxylic acid. Chemists know all about glyoxylic acid, but they never heard of anybody having isolated its internal anhydride. Food & Drug Attorney William W. Goodrich said Government chemists could find nothing in it but distilled water, called it a "formula for nothing."

The Government's parade of witnesses gave some shocking testimony. They had, they said, followed Dr. Koch's instructions in treating cancer patients: first a "detoxifying regime" of enemas and a diet of fresh apple and vegetable juices, then injections of glyoxylide. Koch insisted that no other drugs be used except "the smallest amount of morphine by mouth only." Many of the victims might have died anyway, but his instructions denied them even enough morphine to ease their pain. An osteopath told of trying the Koch treatment on five cancer patients (including his wife); all died. Last fortnight the Federal Court was asked to nol-pros the case. Koch, the petition said, has changed the labels on his drug; they no longer claim a cure for anything. The Food & Drug Administration will continue to keep a suspicious eye on Dr. Koch. But interfering with his \$100,000 business will not be easy; Koch is, says Lawyer Goodrich, "probably the smartest, brightest quack in the U.S."

DR. WILLIAM KOCH
This side of the law.

has had a suspicious eye on Dr. Koch. But last week he was still doing business at the same old stand: his "Koch Foundation," an old brownstone house on Detroit's East Jackson Street. And Dr. Koch's business was still brisk (about \$100,000 a year).

Ever since 1919, a year after his graduation from a reputable medical school, Dr. Koch has been peddling "cancer cures"

TIME, SEPTEMBER 6, 1948

The above clipping was printed on page 160 of the masterpiece on Dr. Koch's work, "The Birth of a Science", written by Drs. Albert Wahl, Bessie Rehwinkel and Lawrence Reilly, and published years ago by the Lutheran Research Society, Inc., Detroit, Michigan. Fortunately, it is still available from the International Association of Cancer Victims and Friends.

- 22 -

this, however, does not palliate the abuses, or relieve or benefit the public. The records in the Koch case are a scandal and a disgrace, but what is far worse, they reveal a public menace and the most heartless exploitation of human suffering.

WHO PROFITS BY SUPPRESSION?

Apparently the greatest single beneficiary of the orthodox cancer treatments -- drugs, surgery, radiation, death -- is the Roman Catholic Church. It owns and operates over 40% of the American hospitals in which such treatment is given. While Meade Layne was preparing and issuing his second edition of "The Koch Treatment For Cancer", Father Emmett McLoughlin was writing his autobiographical "People's Padre" in Phoenix, Arizona. McLoughlin founded and directed St. Monica's Hospital there, now Memorial Hospital.

"In the hospital field -- one of the largest industries in the nation," writes McLoughlin on page 221, "the Roman Catholic Church has quietly assumed a dominant role. It owns 772 hospitals (1954) and in 1951 treated 5,177,094 patients. Some 12,490,844 people were entered in all the nation's non-government general hospitals. The Hierarchy controlled more than 40 percent of those admissions.

"There are 1170 state-approved nursing schools in America. Of these 366 are Roman Catholic, and they train about one-third of the country's nurses. More than half of these are non-Catholic girls but all of them are trained in the Roman Catholic code of hospital ethics. They are taught that every unborn fetus must be baptized into the Catholic church; that no means of contraception, regardless of family finance or circumstances, mental or physical health, must ever be explained; that a wife and mother must be permitted to die on the operating table rather than have a therapeutic abortion, even when it is authorized by the laws of the state.

"In 772 hospitals the Canon Law of the Roman Catholic hierarchy supersedes the laws of the forty-eight states of the Union. And American women die. And American doctors say nothing. And the American Medical Association says nothing. And the United States government gives millions upon millions of dollars of non-Catholic taxpayer's money to Roman-Catholic hospitals under the Hill-Burton Act to build more Catholic hospitals, to defy the laws of the land to permit more women to die, because to save their lives would be against the laws of the Roman Catholic Church. And the United States Public Health Service permits this to happen because it is afraid of the hierarchy's pressure and the 'Catholic vote'. And the state boards of health are submissive because they, too, are afraid of the local Roman Catholic pressure. I know that this is true because, at this writing, I am still secretary of the Arizona Board of Health. This tremendous power over the very lives of Americans is held by a religious minority group that in its most exaggerated statistics does not claim more than 20 percent of the population. . .

"One need merely glance at the program of the annual convention of the American Hospital Association or any of its regional conventions to be impressed with the deference given to the Catholic hos-

pital group. The day before the official convention starts, the Roman Catholic section begins with a special mass by the local bishop. The advertisers and the trade groups serving hospitals sponsor expensive dinners for the attending nuns. Throughout the convention, the nuns are fawned on by convention officials, hospital executives, and surgical-supply salesmen. . . "

CONTROL FROM THE TOP

In the light of Emmett McLoughlin's remarks above it is not surprising to find that the "tremendous power" of the Church extends to the very top of the American Medical Association -- or at least it did in 1962. We quote from an Associated Press item in the Los Angeles "Times" for April 30, 1962: "President Kennedy, it was learned Sunday, has invited seven top-ranking officials of the AMA to a Tuesday White House meeting that could bear heavily on the fate of the administration's medical care program. . . The AMA officials who received invitations from the White House are: Dr. Leonard W. Larson, president, of Bismarck, N.D.; Dr. Hugh Hussey, Chairman of the AMA board and dean of the medical school of Georgetown University Washington, D.C. . . "

The presidency of the AMA is an honorary position offered to a new doctor each year; so the real carryover power is in the hands of the chairman of the board; and in 1962 those hands were Jesuit. Georgetown University is the oldest Catholic Jesuit school in the United States. It was founded in 1791 by Bishop Carroll.

THE WIZARD OF OOZE

It was Koch Glyoxylide that save the political career of the late Senator Everett Dirksen. He made a successful race for the House of Representatives from Illinois, just after World War II. But the strain of political work and unhealthy living practices brought on eye trouble; and just as he was presented with the opportunity to run for the Senate in 1950, he found to his despair that he was going blind.

By that time the American Medical Association had exiled Dr. William Koch to Brazil. Conservative Republican doctors were only too familiar with the effectiveness of Glyoxylide. They urged the politician to go to Koch in Brazil for treatment. He did. It was successful, of course; and the would-be senator returned to the United States to make his first successful bid for the upper house of Congress. Apparently Dirksen's eyesight stayed restored until the day of his death, almost twenty years later:

Some years after becoming a senator, and developing considerable influence there, friends of Dr. Koch approached Senator Dirksen and asked his help in lifting the banishment against this modern genius of medicine.

But the Senator, only too well aware of powerful invisible in-

fluences propelling him to the top, refused. In the mellifluous tones for which he was notorious, he is reported to have said, "The doctors wouldn't like that." He wasn't interested in being a white knight in shining armor, just a journeyman politician faithfully serving those interests which helped put him in office.

A. SACRIFICIAL DEATH

There was a white knight in shining armor in the Senate in 1953, it was Senator Charles W. Tobey of New Hampshire. He laid his life on the line when he introduced the famous FitzGerald Report into the Congressional Record, page A 5690, under the date of Aug. 28, 1953. We quote from the Sept-Oct 1953 "Round Robin" journal of borderland research, page 16:

"How does it happen that the August '53 issue of MAN'S MAGAZINE (if our information is correct) has suddenly become unobtainable -- and that 'inquirers' are offering \$5 apiece for copies? Can this possibly have anything to do with a lengthy article in that issue, entitled A Cure For Cancer (Hoxsey treatment), which is by implication at least a blistering indictment of organized medicine? Are these inquirers persons who have cancer themselves, or afflicted friends, and who want a little help that orthodox medicine denies them? Could be!

"Could be, too, that said 'inquirers' are anxious to suppress any report of a cure not issuing from and profitable to the American Medical Association and its stooges? That would be about as wicked as any human can get. Still, it costs about \$10,000 to die of cancer in the U.S. -- and there are about 1,000,000 current cases. And 10,000 times a million makes a lot of dollars -- as a permanent backlog of work for the medical profession -- which has NO cure for cancer but plunders the public for millions for research.

"Perhaps not the best seller but probably the worst smeller of our day -- and decades -- is the FitzGerald Report and what happened to it, or what Senator John Bricker hopes will happen to it, and what the AMA hopes will happen to all cancer therapy except its own. Well, DEFENDER MAGAZINE (whose religionism we don't care about, but never mind that) prints a five-page article in its August issue titled: THE MOST IMPORTANT MEDICAL DOCUMENT OF OUR GENERATION (A Report by Special Counsel for a United States Senate Investigating Committee, Making a Fact-Finding Study of a Conspiracy Against the Health of the American People).

"In response to insistent public demand, Senator Charles W. Tobey appointed an investigator, Benedict F. Fitzgerald of the Department of Justice, to look into the matter of the Hoxsey, Lincoln, Koch and other treatments for cancer, and (1) of all organizations, hospitals, etc. actively concerned with research or with use of funds (2) discovery, use, value, etc. of all drugs used in cancer treatment (3) all activities opposing the use of drugs and methods of probable or possible value (4) prepaid medical plans involving cancer treatment (5) inequality of opportunity for patients, students and research workers generally.'

"The complete text of this Report is printed by DEFENDER, and it 'brings to light a conspiracy against the health of mankind, promoted by the AMA and certain interlocking groups'.

"Following Senator Tobey's death (how extremely fortunate for the AMA!), Senator John Bricker became Chairman of the Committee and 'the report is still lying on his desk'. He is reported as saying flatly that he intends to do nothing whatsoever about the matter. He 'should be deluged with thousands of letters and telegrams', and we agree. Drew Pearson has a column on the same subject. 'Unless the effort is blocked the next move will be public hearings conducted by Mr. FitzGerald. If they are held, the nation will be rocked by one of the worst scandals in its history.'"

Senator Bricker was an ultra-conservative Republican and his main concern was to conserve the public image of the American Medical Association as the great defender of American health, not to see it destroyed with revelation of a criminal conspiracy. The FitzGerald Report was marked Top Secret and filed safely away. There were no public hearings and no scandal rocked the nation.

Note For Page 9: Wahl, "Least Common Denominator"

The Chemist will easily appreciate the difficulty of giving in a few words a true perspective on the theory of the Koch treatment, but for those new to the subject the following will give substantial clues:

"Poisons containing guanadine and imidazole groups, toxic nucleoproteins and polymerized toxic molecules, accumulate when oxidation is impaired. To oxidize them harmlessly within the body a mechanism normal to the body must be employed. The method chosen was the application of the mechanism of direct oxidation of sugar and fat to the burning of the pathogenic poisons believed located in residual local infections.

"To bring the oxidation within the field of bio-chemical catalysts the breakdown of glucose and fructose was outlined and accomplished by dehydrations, with the formation of double bonds between carbon atoms and the production of conjugated systems of carbonyl and ethylene groups. . . These structures had to be reproduced in molecules that could be used practically. . . The most unimpeded practical unsaturated structure that could be produced synthetically with double bonds between carbon atoms conjugated with carbonyl happens to be 1:4 Benzoquinone or Parabenzoquinone. . . This is the first synthetic antitoxin able to operate on this biochemical basis. . . It contains the antibiotic radical, and contains it twice, and nothing else -- it has no inhibitory radical."

This molecule of the Koch catalyst, the common denominator of the antibiotics, the structural formulas for which cannot be reproduced in this mimeographed publication is O=C=C=O.

Let us take this occasion to add specifically that there is no

secrecy connected with the preparation of the Koch remedies. Difficulties in obtaining either remedies, or full information and instructions, arise from unscrupulous hostility and opposition, and from ignorance, indifference, and greed. And it is to these sources, plus a not unreasonable apprehension, that we trace the fact that no publication in the United States consistently supports the Koch treatment, or features it in any way, or tries to enlighten the public on this matter of vital importance. Round Robin has presented the facts in this issue as a matter of duty and public interest.

BIOGRAPHICAL SKETCH OF DR. KOCH

From Maurice Natenberg's "The Cancer Blackout"

"Doctor Koch's background is hardly that of a charlatan. Born in Detroit in 1885, his degrees are A.B. (1909), M.A. (1910), Ph.D. (1917), all from the University of Michigan; and M.D. (1918), Detroit College of Medicine. From 1910 to 1913 Doctor Koch taught histology and embryology at the University of Michigan, and from 1914 to 1919 he was a professor of physiology at the Detroit Medical College.

"Before he was thirty years old, Doctor Koch made a significant scientific contribution to endocrinology by his work on the parathyroid glands. These tiny glands attached to each side of the thyroid, were once carelessly snipped off by surgeons when they removed goiters. Death from tetany inevitably occurred because the parathyroids regulate calcium metabolism. The 'Journal of the AMA' heralded Koch's work in 1913 with a highly laudatory editorial. Six years later, in the same pages, he was branded a faker.

"In his work on parathyroids, Koch discovered that removal of the glands brings a marked coagulation of blood and tissues. As cancer patients display the same characteristics, he reasoned that a cancer might be due to a toxic condition related to a hormonal deficiency brought on by injury or irritation. This heightened coagulation is a protective mechanism which also stimulates tumor growths. Koch therefore attempted to remove the toxins with tissue thrombin, a ferment which brings on a fever whose heat burns off the toxic elements in the system. This approach was similar to Coley's, but Koch apparently produced curative fevers a little more consistently with tissue thrombin and thereby secured better results.

"When Koch boldly claimed a cure for cancer based on the results of treating eight cases, he became a marked man. His claims were derided, and he quickly fell into disfavor with the reigning surgeons in the Wayne County Medical Society. (Not to mention the hospitals handling the surgeons' highly profitable business!)

"Doctor Koch approached the disease from the standpoint that the cancer is caused by toxins remaining in the blood system. In line with his original interpretation of sugar oxidation as a function to destroy toxins resulting from metabolic processes which he taught at Wayne University from 1914 to 1919, he believed this to be due to insufficient oxidation. He also believed that germs also pro-

duce toxins which are incompletely removed, thus subscribing in part to the virus theory of cancer and leading quite naturally to his belief that the solution to the cancer problem lay in securing more active catalysts to stimulate the body's capacity to oxidize toxins.

"This reasoning led to the creation of Glyoxylide. According to Koch, his preparation starts a chain reaction in which toxins are converted into antitoxins by the addition of molecules which alter their composition. It was also Koch's belief that the cancer germ or virus is originally harmless but becomes virulent when poisoned by the toxins in the system.

"This highly ingenious reasoning, although based on authentic physiology and chemistry appears a bit too magical. A substance which through some alchemy actually converts a toxin into an anti-toxin seems incredible. However, opponents of Koch's theories have formulated no scientific arguments to refute it. Without any investigation, Koch's theories have always been peremptorily dismissed as nonsense.

THE FULL TREATMENT

"The Koch treatment doesn't consist entirely of Glyoxylide but also includes a rigid diet which excludes all foods which are toxic or which contain oxygen inhibitors, such as meats, beans, lentils, coffee, alcohol and tomatoes. (Almost all canned and bottled foods and some frozen foods, now have several oxygen inhibitors in them to prevent decay.) Only distilled water is permitted and daily enemas are prescribed. Neither Glyoxylide alone nor diet alone will cure cancer; according to the Koch school, each must be used in conjunction with the other (to obtain a complete cure). One injection of the catalyst is usually effective for six months, and additional injections are not given until decreased oxidation is again evident. The treatment has the advantage of not requiring hospitalization. (This fact alone would earn the undying enmity of the hospital trust!) It is said to greatly alleviate pain, obviate the use of narcotics (which cuts the profitable sale of drugs) and to stimulate the appetite.

"The Koch theory of cancer is as follows: 'Clinical observation discloses the persistence of toxemia over a period as long as twenty years previous to the advent of the growth. After the growth has come, these toxic manifestations disappear or nearly so. After a surgical removal of the growth they return and with recurrence of the growth again disappear.'

Why do the toxic manifestations return after surgery? One reason is that the surgeon's knife cuts through such defenses as the body has thrown up around the effected area, thus releasing cancer cells to spread throughout the system. Another reason is that no effort has been made to get the victim to change his way of living! The original living pattern of polluted environment, negative emotional tensions of hatred, bigotry, jealousy, condemnation, criticism, unforgiveness, guilt complexes, and bad eating habits are still there.

"We designate these symptoms,' continues Dr. Koch, 'as the pro-growth symptoms for they differ from those consequent to the activity of the growth itself. The strongest and the sufficient proof that cancer is a response of protection against a definite toxin, however, rests with the fact that removal of the toxin and destruction of the toxic sources is followed by complete involution of all cancer tissue, complete healing of the regions involved, return to health, with absence of growth and pro-growth symptoms, and the absence of recurrence.' (From "Birth of a Science" by Rahl, Rehwindel and Redley; Lowell, Arizona, the Lutheran Research Society, 1957.)

"In the recovery process, according to the Koch theory, the cancer cell is digested and eliminated by being 'split into the chemical elements from which it is constructed, namely, into amino acids, fats, sugars, salts and certain toxic substances. The food materials are turned back to the blood to nourish the body. The toxic substances must also be absorbed but are useless and toxic and they are eliminated through the kidneys, burned up through fever, or passed out in the perspiration, feces and mucous secretions'."

ANOTHER COURAGEOUS DOCTOR

W. Spencer Way, D.O., Orlando, Florida, his article on the "Oxidation Catalyst" in the December 1951 issue of the Journal of the American Association of Physicians:

"Oxygen is so important that human life cannot be sustained more than a few minutes without it. Despite this fact, its use in medicine has been confined almost exclusively to emergencies in which external respiration has been embarrassed. Now extensive research on internal respiration has opened up an entirely new concept in the treatment of disease.

"Internal respiration is the exchange of oxygen for carbon dioxide which takes place at the individual cell level. Without this, normal metabolism cannot take place, since it is the oxidation (burning) of the nutritional elements which makes for their complete assimilation by the cell. Likewise, oxidation of the waste products of the cell metabolism makes possible their complete elimination. So, if we assume that the cells in question do receive proper nutritional elements -- vitamins, minerals, proteins, hormones, etc -- in the presence of a normal oxidation process, we should have healthy cells, and thus healthy tissue.

"Lee and Hanson believe that natural foods with their natural vitamins and minerals contain, within themselves, enzymes designed to accomplish just this. If this be true, it would appear that if the food ingested over a period of time were deficient in calcium, vitamins, hormones, or other vital elements, the efficiency of the cell would suffer by reason of its deficient oxidation and the consequent accumulation of its own metabolic poisons.

"According to Laing, 'Enzymes may be viewed essentially as a three-way combination of metal, a specific protein complex, and one or more vitamins. Until recently it was thought that only one vita-

min was to be found in any one enzyme, but with the discovery that folic acid is a vitamin composed in part of another vitamin known as para-amino-benzoic acid, it is conceived that two or even more vitamins may combine to form one of the three links in the enzyme chain. The nature of the activities of the enzymes depends obviously upon the kinds of metals, vitamins and proteins involved. It is logical when any one of these three components is altered, either as to type or quantity, that the resulting activity may be changed in character and degree. These enzymes are the tools which the body uses to direct its mental and physical activities. They are the things which first get out of gear when the processes of the body become abnormal. The prevention or remedy of disease must, therefore, come through proper use or manipulation of these systems. We know that we can suppress some of them by drug administration, but what we have yet to learn is still more important; namely, how we can stimulate the activity of those that are functioning subnormally or perhaps hardly at all, even though working in the proper direction.

"It is not surprising that Quigley reports that in a study of 2,707 cancerous persons, all were deficient in calcium, vitamins and iodine, and he also reports 20% fewer recurrences when these deficiencies were corrected. Furthermore, Wolbach stated that in a cancer area there is apparently a local alteration of nutrition. Behan states that edema of cancerous tissues is a pernicious complication. Warburg found that the inorganic salts affect oxidation processes of cells and consequently influence their metabolism. He concludes, therefore, that calcium would be of some value in the treatment of cancer.

"Sweet says cholesterol apparently stimulates the growth of cancer tissue. According to Dehan there is accumulation of lactic acid in cancer tissues. He believes that deficient oxidation in tumor tissues is accounted for by a break in the oxidation process and emphasizes that the causes that induced cancer are usually too deep and widespread to be controlled by surgery or irradiation alone. He states further that accessory methods of treatment are not only justified but imperative if the mortality rate is to be reduced. He assumes that a method of treatment which might formalize the permeability of cancer cell membranes might have a beneficial and perhaps curative influence on cancer tissues. Rondoni not only believes that oxidation deprivation is a preliminary to the development of malignancies but also indicates that increased oxidation is an essential factor in its treatment. He found that carcinogens (cancer) increased the amount of oxygen consumed and excreted by the affected tissues in a rabbit.

"Davidson devoted ten years to experiments on mice. Briefly, this is his report: He took healthy mice, scratched the skin and painted it with gas-works tar, causing a cancer. He fed these mice a low-vitamin diet and bred them until, at the end of the fourth generation, cancer covered their entire heads and 50% of their bodies. Conversely, taking mice in which he had developed 100% cancer and feeding them and their offspring a high-vitamin diet, he eventually developed a strain highly resistant to cancer; thus establishing that the degree of their resistance to cancer was di-

rectly dependent on their diet. He also discovered that cancer in a female mouse became inactive during gestation. This is supported by Crile who found that no cancer exists in embryonic life.

THE EXTREME IMPORTANCE OF BREATHING!

Like the Yogin of the East and the Kabbalist of the West, the cancer-victim -- if he wants to purify his body of disease -- will have to consciously and earnestly increase his intake and output of air. As Dr. Koch said time and time again, cancer-sufferers are poor oxidizers! Dr. Way gives this supporting data.

"Reduced oxidation appears to result from exhaustion through overwork, exposure to cold, the action of chemical or bacterial poisons, particularly if there be a vitamin or mineral deficiency. Any depletion of the oxidation mechanism leaves the cells incapable of completely burning poisons from within or without (and shallow or inadequate breathing should be the first concern of both doctor and patient where malignant growths are present). The longer this material is present the greater the difficulty of removing it, and it may become so permanent that it is handed down to offspring. This fact should be given careful consideration when couples with histories of dominant cancer in their families are contemplating marriage and children.

"Koch discovered that heart muscle tissue was resistant to cancer and that an extract made from it retarded cancer growth, much in the same way pregnancy did in Davidson's mice. He succeeded in isolating its chemical constituents and was able to produce it synthetically. This oxidation catalyst, which he named Glyoxylide, has stimulated controversy, but is being increasingly used, simultaneously with natural vitamins, minerals, chlorophyll, hormones, and a diet composed of foods easily oxidized."

From information left in the BSRA cancer file, it appears that the basic ingredient of Glyoxylide is glycolic acid. Apparently Dr. Koch discovered or isolated glycolic acid crystals, according to letters from naturopathic doctors schooled in homeopathy. Koch's original laboratory work was complicated and required the skill and dedication of a top-flight chemist, which he was; but the preparation of a homeopathic remedy itself is not particularly difficult. To continue Dr. Way's article:

"This confirms the findings of Fischer who kept cancerous mice under a pressure of two atmospheres for 14 hours and cured their cancer. If agents acting as catalyzers for oxygen were used, the results were even better."

We consider the above the most important and revealing item in Dr. Way's article! Just think, merely by doubling the atmospheric pressure Fischer so accelerated the intake and absorption of poison-burning oxygen that the cancerous mice cured themselves! We wonder if any followup research was done on the probability of arrested cancers in deep sea divers and others who work in heavy air pressure

as a matter of daily routine. In any event, this lab man seems to have made and successfully used a "Bessemer Converter" for living organisms. It was a little over a hundred years ago that Bessemer in Germany and Jones in Pennsylvania came up with the idea of burning the impurities out of ordinary iron with oxygen and thus making good quality steel. Air was forced into the mass of molten metal in the huge kettle to burn up the junk. It worked. As for Fischer's experiments with mice, he only confirmed what the Spiritual Teachers of mankind, East and West, have known and demonstrated for thousands upon thousands of years: forced or deep and rhythmic breathing purifies the body and balances the vital forces. Now that the Koch catalyzers are no longer easily available, the unhealthy would be wise to consider using the "glyoxylide" in which they are totally immersed, AIR!

SUMMARY OF TREATMENT

"In the light of the above findings," concludes Dr. Way, "does it seem reasonable that a doctor should be criticized for instituting the above measures, when a patient who has been given up by orthodox methods of Roentgen rays, radium and surgery, comes to him desiring a different approach? We feel justified in taking these so-called hopeless cases and doing the best we can therapeutically, in an effort to reverse the pathological body chemistry, at the same time being careful not to let them suffer.

"So far as possible, the lower digestive tract is washed clean (enemas). The patient is placed on a liquid diet for two or three days, supplemented by natural vitamin and mineral preparations (particularly calcium and vitamin A), and the hormone of the opposite sex. If the lesion be in the digestive tract, care must be taken to manage the nausea and vomiting and/or diarrhea before injecting Glyoxylide. When all the free toxins have thus been flushed out, making sure the kidneys function well and the heart is supported when necessary, Glyoxylide is injected. Enemas are continued, especially when indican appears in the urine. A great deal of pain may be controlled by hot fermentations, and the control of flatulence. The Glyoxylide anti-toxin itself appears to allay the pain in many instances.

"The diet consists of natural foods, easy to digest and oxidize. Those foods which hinder the oxidation process, such as animal proteins, are eliminated. Brewer's yeast, Knox gelatine, powdered bone meal, and vegetable proteins are substituted in their place. A hematinic appetite stimulant can be given before meals for anorexia. If and when temperature is elevated, the usual antibiotics such as penicillin and aueromycin are not contraindicated. Distilled water is used for all purposes.

"Many recoveries from acute and chronic diseases, heretofore resistant to all treatment, have been the reward of our efforts. Patient response, repeatedly demonstrable, appears to be the most potent argument."

ANOTHER FEARLESS DOCTOR SPEAKS OUT

Dr. Wendell C. Hendricks is a well known physician and surgeon with offices in Hollywood and in Bakersfield, California (1952). We quote the following passages from his 23 page pamphlet, "The Koch Treatment", with his permission.

"In 1938 while practicing medicine in Arvin, California, I was confronted with the problem of treating a large number of cases of hay fever and asthma. Having nothing satisfactory with which to treat them, I set forth in the attempt to find a solution to the problem. After attending many post-graduate clinics and consulting with numerous specialists I returned to my practice with little or no gain of knowledge in a satisfactory treatment of allergy.

"It was upon my return from this futile search that I found the answer. It was upon my desk along with a stack of correspondence, a book entitled 'Chemistry of Natural Immunity', by William Frederick Koch, M.D. After carefully reading the contents of this booklet I knew I had finally found that which I had been seeking.

"I immediately began treating patients with the Koch treatment and my research in allergy, cancer and infection has continued without interruption until this date. Not only have I proven through practical application the exactitude of Dr. Koch's theories, but I have had a share in helping humanity find relief from their sufferings.

"I wish to pay honor to Dr. William Frederick Koch, founder of the Koch treatment, who made it possible to restore complete health to my father, who at the age of 60 was dying of pulmonary tuberculosis; who now at the age of 70 is actively engaged in missionary work in the British West Indies.

"I thank God for allowing me the opportunity of being so intimately associated with Dr. Koch and his wonderful medical discovery. Time and time again I have witnessed miracles beyond imagination being performed with the Koch treatment, and to those poor unfortunates who are 'too blind to see the truth', I offer my profound sympathy.

"ALLERGY has taken a prominent place in twentieth century medicine and the term has become a by-word in medical circles and with the general public. During the past twenty years considerable attention has been given this classification of disease and many scientific experiments have been carried out to determine its origin and cure. Volumes have been written on the subject and many new drugs have recently been discovered for its alleviation. Of all these drugs not one has been found to give more than symptomatic relief and for only a short period of time. The true cause of allergy is lowered oxidation process within the body, causing the affected individual to be sensitive to foreign substances entering the body. Only when the oxidation mechanism is restored to its original highest state of efficiency can the sensitivity be eliminated.

"INFECTIONS as with allergy, whether they be associated with a 'germ' or 'virus', can only be overcome by restoring the oxidation of body tissues, thus placing the body in the best possible condition to render the destructive action of germs and viruses inert.

Infections are classified by name, according to the area of the body affected and the symptoms are produced. Certain toxins have affinity for specific types of tissues; some affect only a single organ while others affect the entire body. Disease, regardless of its name or location, can only be eradicated by restoration of 'natural immunity' within the body.

"CANCER is defined by the Hendricks Research Foundation as a 'condition within the body where the oxidation has become so depleted that the body cells have degenerated beyond physiological control'. This depleting action may be the result of long standing virus infection or allergies. The body becomes so over-whelmed with toxins that it automatically sets up a 'natural defense' in the form of a tumor mass, to harbor these poisons and remove them from general activity within the body.

"A tumor is nature's protection to the patient, and unless the source of the toxins is removed, the toxins will continue to accumulate and the 'mass' will grow larger and larger. Our intention is to remove the cause of the cancer (at the physical-etheric level) by oxidizing the body toxins into anti-toxins, as previously stated. This allows the tumor mass to shrink in size as there is no more use for it, i.e., no further accumulation of body toxins."

To the student of life there is a glaring weakness in the remedial action offered by the doctors here, who are only students of the body, albeit very good ones. Psychosomatic medicine suggests that the cause of cancer is in the mind and the emotions. Cancer or any other disease is only the visible end result of an invisible chain of reactions leading into other levels of consciousness. Some of these more obvious invisible causes of visible diseases would be such negative emotional and mental states as bigotry, hatred, jealousy, condemnation, criticism, duplicity, not to mention outright immoral and criminal activity. We'll touch on these occult causes in the next section.

"Treatment with X-ray or Radium is not the answer to the problem, as these modalities do not cure cancer (as admitted by world-renowned cancer specialists). X-ray and Radium blast the cancer mass and spread cancer toxins to other vital areas of the body, thus creating a much greater problem. Surgery, except as an emergency life-saving measure, is not a cure for cancer, as it merely removes the accumulated mass of toxins, it does not remove the cause, and thus nature finds a new location to set up the protection against body toxins and a new tumor occurs, and on and on.

"KCOH OXIDATION CATALYSTS are harmless chemicals which are injected hypodermically. The Koch catalysts help the body to restore its natural immunity and oxidize allergy and cancer producing poisons, as well as reducing infectious toxins to harmless structures, and thus correct the very cause of the disease. Their purpose is not to destroy a disease tissue or even a germ, but rather to restore the normal function of the body such a high degree that disease toxins can not remain there. They raise the resistance of the tissues against toxins and allergins, etc. and thus nullify their

destructive action, converting them into anti-toxins and anti-allergins. Instead of an 'atomic bomb' action, where the enemy is blasted to kingdom come and all surrounding territory is ruined beyond repair, the Koch catalysts act as 'mediators to correct an unpleasant situation diplomatically, without harm or devastation'.

"The question is frequently raised, how can one form of treatment be so beneficial for so many types of ailments? The answer is simple. The Koch catalysts have no special affinity for certain types of tissue or forms of disease. When injected into the body they enable the body to produce its own defense mechanism and thus bring about a curative action. It makes no difference what part of the body is affected or what is affecting it, the disease destruction action of oxidation goes on in whatever area of the body it is needed.

"Each case which undergoes treatment is a distinct problem in itself. Although the general scheme of heredity, disease progress, and the recovery process show conformity in their characteristics, each patient must be studied individually and the treatment applied with due consideration for the particular features of each case. The element of cooperation is important and no patient should take the Koch treatment unless he is willing to give full cooperation to the doctor in charge. After he has taken the treatment he should not follow the advice of friends unless the advice conforms to what is outlined for him by his physician. More dangerous is it indeed to follow the advice of some well-meaning physician who neither understands the treatment nor has all the data on the case.

"The recovery process is cyclical and the periodicity is expressed in units which are divisible by three, whether they be hours, weeks or months. Each cycle is composed of two phases: a positive phase, during which the patient feels better and realizes his improvement, and a negative phase wherein there is temporary aggravation of his symptoms or a reaction of chills and fever. When these reactions occur they usually only last a few days, and are not only harmless but beneficial to the patient. Many patients recover without any reaction.

"It is difficult for the average person to understand how a single injection can continue its action over a period of several weeks or months. When the starter button is pushed on an automobile and the motor starts to run it is not necessary to continue pushing the starter button! All that is necessary to keep the motor running is an adequate supply of fuel, and the better the quality the smoother the motor will perform. The body needs only to get the oxidation mechanism started. The Koch catalysts may be considered to be the starter, and after getting the recovery process started all that is necessary to keep it going is to provide the body with fuel, adequate nutritious food (and positive, helpful, loving emotions!), along with other supplementary substances which might assist the recovery process. When it does become necessary to repeat the injection, it is usually because some factor has arisen to deplete or destroy the action of the catalyst. Repeat injections, when needed, are seldom given more often than 2-6 month intervals. Cancer cases often require more injections than allergies or infection.

THE WILL TO LIVE

"No patient, be he rich or poor, great or small, can expect to recover from his illness by this treatment or any other treatment unless he has the will to live. It is impossible to cure a patient in spite of himself! Every patient who undergoes treatment must have the will to live.

"The patient must:

1. Have a definite major purpose for recovery.
2. Be willing to cooperate in every way with his physician and give up habits which caused or contributed to ill health.
3. Be willing to 'give something' in return for health. To dedicate himself to the task of helping others to receive the same benefit he has obtained.
4. Keep himself tuned in with God-The Infinite, the source of all power of healing.

CASES TREATED

"I have personally treated over three thousand patients with the Koch catalysts and I consider the Koch treatment the 'outstanding medical discovery of the age'.

"Before being treated by the Koch method, numerous cases had already been treated by many other forms of treatment without satisfactory results. Recoveries were accomplished in those cases with the Koch treatment even after other standard measures had failed. We have treated patients from nerarly every state in the Union, as well as from Canada and other foreign countries.

"Allergies successfully treated include: bronchial asthma, hay fever, urticaria (hives), eczema, and psoriasis. Associated with these allergies were complaints such as headaches, dizziness, muscular aches and pains, indigestion, palpitation of the heart, pelvic disturbances, excessive perspiration, hot flashes, numbness, nervousness, insomnia, etc. These symptoms cleared up along with the allergies.

"INFECTION cases successfully treated: acute coryza, anal fistula, bronchitis, broncheictasis, malaria, nephritis, pneumonia, poliomyelitis, coccidiomycosis, gonorrhea, influenza, infectious mononucleosis, malaria, rheumatic fever, scarlet fever, sinusitis, strept throat, syphilis, tonsilitis, tuberculosis, vincent's infection, and undulant fever.

"Other so-called incurable conditions which have responded to the Koch treatment: Cancer, arthritis, anemia, cataract, colitis, coronary heart disease, epilepsy, diabetes, goitre, gout, Hodgkins disease, leukemia, liver and gall-bladder diseases (not stones), migraine, myocarditis, prostatitis, rheumatism, stomach and duodenal ulcer, tubovarian disease, uterine and breast tumors.

"We wish to make it plain right here that not all of the patients treated with the Koch catalysts recovered. . . ."
